This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

EXPLANATIONS ON MAP—TRANSLATED.

Map of the Oriental Republic of Uruguay. (A reduction of the map drawn by Gen. Don José M. Reyes of the engineers corps, with amendments based on data and information on file in the archives of the Bureau of Public Works.)

This map, dated Montevideo, January, 1893, is the work of Don Severo A. Rodriguez, a member of the topographical division of the Bureau of Public Works, and is published under his signature. It also bears the approval of the Bureau, as witnessed by its seal and the signature of its Director.

Chapter I.

THE COUNTRY, ITS SITUATION, AREA, PHYSICAL GEOGRAPHY, AND RESOURCES

Uruguay, officially known as "la República Oriental del Uruguay" [the Eastern Republic of the Uruguay], is situated on the eastern coast line of South America, in the temperate zone, and is the smallest of the independent States of that continent, but one of the most favored in climate, soil, and geographical situation. The country is also known as "Banda Oriental del Uruguay" and "Estado Oriental," from its position on the eastern side of the river Uruguay.

It lies between 30° and 35° south latitude and 53° and 58° 30′ longitude west of Greenwich; is bounded on the north, northeast, and east by Brazil, from which it is partly separated by the river Cuareim, the Cuchilla de Santa Anna, the river Yaguarón, Lake Merim, and the river Chuy. The Atlantic Ocean bounds it on the southeast and south, and the Rio de la Plata on the south and southwest, while the Argentine Republic, separated by the river Uruguay, stretches along the western confines.

The area of the country is officially stated to be 186,920 square kilometers, equivalent to 72,172 English square miles. It is an irregular polygon in shape, with a perimeter of about 1,075 miles, 355 miles of which extend along the Atlantic Ocean and the Rio de la Plata on the southeast and south, and 270 miles along the river Uruguay on the west, while the northern and eastern border has a length of 450 miles along the Brazilian border.

About five miles from the southern coast, in the Rio de la Plata,

belonging to the department of Canelones, are three small islands, and upon one of them, Isla de Flores, there is stationed the lazaretto, comprising two large buildings capable of accommodating 1,000 persons. To the east of the coast, off Maldonado, are two islands belonging to that department. Garriti, one of these islands, about two miles from the port of Maldonado and protecting its harbor, was at one time a fortified place.

The island of Lobos, about four miles from the coast, in the Atlantic Ocean, is one of the principal seal islands of the country. On these several small islands and three groups off the coast of Rocha, some of which are employed for pasturage, seals are found in abundance in the winter season, and their capture, regulated by the State, forms one of the chief industries of the inhabitants along the coast. There are some small and unimportant islands in the Rio de la Plata off Colonia, on one of which, Faralón, there is a light-house of considerable size, and there are besides, numerous small ones along the course of the Uruguay, many of them suitable for agriculture and affording rich fields for pasturage.

The coast line possesses very few bays or natural harbors, that of Montevideo being the only one of any importance. Cabo Santa María, which divides the Rio de la Plata from the ocean, is the principal cape of the coast line.

The Atlantic coast is low and sandy. On the Rio de la Plata the shore, indented by several open bays, is high and rocky. The country along the Uruguay is generally low, though in places table lands of a moderate elevation skirt the shore. The interior of the country presents an almost continuous undulation formed by the numerous chains of low mountains and hills with grassy slopes extending in all directions, while luxuriant groves stretch along the banks of its principal rivers and streams, which, descending in great numbers from the hills and winding through the country, water its fertile pasture lands.

The country in the south and southeast is diversified and

picturesque; the land is undulating and grassy, now and then emboldened by abrupt elevations, rising occasionally to a height of almost 2,000 feet. The land in the southwest is of exceeding fertility, being composed of detritus of great depth and rich alluvial deposits. The undulating aspect prevails here also, varied here and there by considerable elevations. There is a scarcity of tree growth except along the banks of the streams. Throughout the whole northern part of the country, wide and fertile valleys extend in every direction, shut in by the many mountain chains. Here, the country is well wooded and its many streams furnish a plentiful supply of water.

The principal chain of elevated land or low mountains is the Cuchilla Grande, which traverses the country from northeast to south. Other chains are the Santa Ana, between Brazil and Uruguay; the Cuchilla de Haedo, stretching from the Brazilian border southwesterly to the Uruguay River; the Cuchilla de Belén, and the elevations in Minas. These are connected with numerous other chains of hills, forming the heights and gentle slopes which cover the country.

Nowhere does the land exceed a height of 2,000 feet above the sea; and the greatest elevation is said to be near the borders of Brazil, where the mountains reach an altitude of about 1,980 feet. The lack of trees of any size detracts greatly from the appearance of the higher lands, but they are covered with a thick growth of shrubs which flourish in the stoniest soil.

The territory of Uruguay is watered by sixteen rivers, several of considerable size, and by innumerable streams or *arroyos*. The principal rivers are the celebrated Rio de la Plata and the river Uruguay, which partly bound the country, and the Rio Negro, flowing through the center of the land.

The Rio de la Plata, formed by the union of the Paraná and the Uruguay, in latitude 34° south, longitude 58° 30′ west, extends along the southern line of the country for a distance of about 224

miles to its mouth. This grand estuary is about 24 miles wide at the island of Martin García, near the mouth of the Uruguay; below, between Buenos Aires and Colonia, it measures 30 miles, while opposite Montevideo its width is 48 miles; and at Cabo Santa María, in Uruguay, where it empties into the Atlantic, it attains a width of 120 miles. In many places, the water is very shallow, and the tide, by reason of the winds, is scarcely noticeable. The tributaries of this great river drain a vast extent of country, including most of Paraguay, Uruguay, and the Argentine Republic, even extending to parts of Bolivia and Brazil; and its muddy waters can be traced on the Atlantic Ocean for almost 200 miles from its mouth.

The river Uruguay, rising in Brazil among the mountains of Santa Catarina and flowing west and then south, forms, when it reaches the territory of Uruguay, the boundary between it and the Argentine Republic till its junction with the Paraná. Where it first touches Uruguay, it receives the Rio Cuareim, a tributary 160 miles long. Here, it has a width of about 1,500 yards and is divided by a line of wooded islands. Its next important tributary is the Arapey. Here, the bed becomes rocky and the current swift, till it forms the Salto Chico, a cataract of considerable size. Below, the river, fed by many tributaries, grows rapidly, and about 80 miles from its mouth receives its largest affluent, the Rio Negro. Continuing its course, it unites, in latitude 34° south, with the Paraná and forms the Rio de la Plata. The length of the Uruguay is about 1,000 miles. Its waters are clear and it contains many islands in its course.

The annual freshets occur in September or October, with an average rise of about 20 feet; though in seasons of severe rains its waters reach a maximum of 40 feet above low water. The width of the river from its mouth to Fray Bentos is from 6 to 9 miles, its channels narrowing above by reason of the many small islands, which form narrow and deep canals; the normal width of the cur-

rent is from 3 to 4 miles, gradually narrowing to its source. This river is navigable to Paysandú for large vessels, while vessels engaged in the coasting trade ascend as far as Salto. Further ascent is impossible except in seasons of flood, by reason of the cataract of Salto Chico, about 200 miles from its mouth; but beyond these falls, there is unimpeded navigation for vessels of light draught for about 300 miles.

The Rio Negro is the only important river in the interior of the country, which is practicably navigable for any distance. Rising in the Cuchilla de Santa Tecla in Brazil and crossing Uruguay from northeast to southwest, it divides the country into two nearly equal parts, and after a course of about 350 miles empties its waters, fed by many *arroyos*, into the Uruguay. This river is navigable for vessels of light draft for about 55 miles, and Mercedes, its principal port, has considerable river traffic.

The other thirteen rivers are the Cuareim, separating Uruguay on the north from Brazil, with a course of 160 miles; the Arapey, Daymán, and Queguay in the east, flowing into the Uruguay, and respectively 105, 80, and 115 miles in length; the Tacuarembó flowing 125 miles from the north into the Rio Negro, and the Yi emptying into the same river on the south, after a course of 135 miles; in the east the Yaguarón and the Tacuarí about 80 miles each in length, emptying into Lake Merim; the Olimar Grande with a course 82 miles long, uniting with the Cebollati, which flows for a distance of 95 miles into Lake Merim; on the south the San José running 93 miles into the Santa Lucía, the San Salvador flowing through Soriano for 50 miles into the Uruguay, and the Santa Lucía emptying its waters into the Rio de la Plata near Montevideo, after a course of 94 miles.

All these tributaries of the Uruguay or La Plata are navigable for small vessels for distances varying from 15 to 30 miles, and the whole river system of the country is fed by more than 500 "arroyos," which thoroughly irrigate the land.

The waters of the Rio Negro, the Uruguay, and some of the interior rivers have the property of petrifying animal and vegetable matter, and those of the Rio Negro and Santa Lucía are said to possess therapeutic qualities.

Uruguay contains some *lagunas* or shallow lakes of considerable size. In the southeast, near the coast, are the Castillo Grande, with an area of 162 square miles; Rocha, 27 square miles in area; Laguna de los Difuntos, San Ignacio, Santa Teresa, Sauce, and several others situated in the departments of Rocha and Maldonado; la Hermosa and la Gaucha in the northeast, in the department of Cerro Largo, and several small ones in the departments of Tacuarembó on the north and Florida on the south, together with Lake Buceo in Montevideo, and several others of less importance in other departments.

To the east of the country, is Lake Merim, which large body of water touches the departments of Rocha, Treinta y Tres, and Cerro Largo; this lake has a length of about 100 miles and is 20 miles in width; it lies wholly within the territory of Brazil, to which it belongs.

Chapter II.

HISTORICAL SKETCH.

On the 8th of October, 1515, Juan Diaz de Solís sailed with three caravels from the port of Lepe, in Spain, and early in the following year, reached the coast of Brazil, which by that time had been visited by several explorers. Continuing down the coast, he reached Cape Santa María, within the limits of the present Republic of Uruguay, and doubling its extremity, entered the large bay which lay beyond, and which it is said he had before visited in 1508. From this place, he continued his voyage along the coast to the west until he reached an island supposed to be that which is now called San Gabriel, not far from the present city and port of Colonia. Leaving two of his vessels anchored at this island, he set sail with his smallest ship and arrived at the island in the mouth of the Rio de la Plata, to which he gave the name of his pilot, Martín García, which it has retained to this day. Determining to take possession of the country in the name of the Crown of Castile, and to explore the region of the coast, he disembarked with nine companions. A band of natives from a place of concealment had watched their landing, and attacking them unexpectedly, killed Solis and eight of his men, and captured the remaining one, Francisco del Puerto, who had been badly wounded.

The natives of Uruguay at that time were divided into two powerful tribes or nations—the Charruas and the Yaros. It was to a band of the former that the great navigator Solis fell a victim. One account of the landing of Solis represents him and his

band as captured and devoured by the natives; but there is no other evidence that cannibalism was practiced by them.

The Charruas belonged to the great family of the Guaranies, and their character and disposition are indicated by their name, which in the Guarany language meant fierce and quarrelsome. As a general rule, the various South American tribes were named from some prominent characteristic. Their weapons were the rude arms common to all primitive races, and their utensils, such as are found buried all over the continent—stone hatchets, rough clay pottery, etc.

Three years later, Hernando de Magallanes set sail from the port of San Lucas and, following the same course as Solis, entered the Rio de la Plata, whose stream he ascended some distance and explored the waters of the Uruguay, Guazú, and Paraná rivers in an attempt to penetrate westward in his search of a route to the East Indies, which was the constant object of the explorers of that time. Abandoning the attempt, he left the river and continued his voyage down the coast of Patagonia, until driven back by the cold storms.

On the 1st of April, 1526, Sebastian Cabot left Seville for the Moluccas, but, deciding to follow in the route of Solis, reached the Rio de la Plata. He sent an expedition under his lieutenant, Juan Alvarez Ramon, to explore the country along the Uruguay, but the band was attacked by the Charruas, and its leader killed, with many of his followers. Cabot himself ascended the Plata, exploring the west shore, and entering the Paraná, pushed his expedition as far as the great falls called Salto de Agua. Returning, he entered the Paraguay, which he ascended as far as Bermejo.

After these explorations and against the fierce and determined opposition of the savages, who resisted desperately every advance of the strangers, the first attempts at occupation of the region were made by the establishment of military posts and settlements along the explored streams. In 1527, Cabot directed the erection of the

first fort constructed in the "Banda Oriental," or belt of country east of the Uruguay. It was situated on the river San Salvador as a protection against the attacks of the natives, and was held until 1580, when it was abandoned by its garrison.

In 1550, Capt. Juan Romero was sent from Asuncion to make the first settlement within the present limits of Uruguay, and established himself on the San Juan, giving to the settlement the name of San Juan Bautista. Two years later, the place was abandoned by the colonists, who had become disheartened and unable to resist the continued attacks of the savages. A settlement was begun in 1574 at the place where Cabot had established his fort, on the San Salvador, and was called by the name of that river. This colony also had been sent from Paraguay, and, like the last named, was abandoned by the settlers, who returned to Paraguay, worn out by the unrelenting warfare waged upon them by the natives, and lacking the means of subsistence.

In the meanwhile, the Spanish conquerors had established themselves firmly in Paraguay and were pushing their settlements into the country now known as the Argentine Republic, renewing, from time to time, their attempts to gain a solid foothold in the region east of the Uruguay, whose rich pastures attracted the raisers of cattle. The opposition of the natives was, however, so fierce and so successful that little or no progress towards occupation was made for a long time. In 1603, a veteran Spanish force under Saavedra was routed in a pitched battle by the Charruas.

It was not until 1624 that the first of the centers of population that now exist was founded. This settlement was made on the Rio Negro, about two leagues from its mouth, by a monk named Bernardo de Guzmán, and was called Santo Domingo de Soriano.

The Banda Oriental belonged nominally to the Government of Buenos Aires, but being in a territory whose jurisdiction was disputed by Spain and Portugal, and being almost entirely unoccupied by the Spaniards, the Portuguese, who had already established

themselves firmly in Brazil, attempted the occupation of the country by the establishment, in 1680, of the colony of Sacramento (Colonia), on the Rio de la Plata, almost in face of Buenos Aires. A lively trade sprang up between the two places, and the inhabitants of the latter were enabled to obtain at a much lower price articles which they had been compelled to obtain from Peru under an exorbitant tax. Extending their possession in 1723, the Portuguese seized and fortified the heights surrounding the bay of Montevideo.

The Spaniards, menaced in their possessions and revenues, dispatched an expedition in 1724 against the Portuguese at Montevideo, who surrendered to the attacking force without resistance; and in January, 1726, Montevideo was founded by a settlement of six families under Marshal Bruno Mauricio de Zabula. These families came from Buenos Aires, and were joined during the same year by twelve more brought from the Canaries.

In 1735, Colonia was besieged by the Spaniards, and the investment of the place lasted till September, 1737, when the attacking force was compelled to withdraw. The attack was resumed in 1761, and this time the town was forced to capitulate, but was restored to the Portuguese in 1763 by the treaty of Paris. In 1762, the town of San Carlos was founded, and in the following year, Maldonado was settled by some families coming from Rio Grande, under the lead of Pedro Ceballos. Santa Lucia was founded in 1778 by immigrants from Asturias and Galicia, and in 1781, other Asturian families established the settlement of Pando. Other colonial centers were subsequently settled along the border and in the interior, as Paysandú in 1782, by twelve families from the Missiones; San José and Minas, in 1783; Rocha, in 1793, by Asturians and Galicians.

The Viceroy Zeballos, who was at the head of the Spanish colonies on the Plata, finding it impossible to enforce the old fiscal laws on account of the numerous frauds on the revenue, which

he had no means of preventing, declared exempt from duty most of the merchandise coming from Spain, and imposed an export tax of 3 to 15 per cent on the products of the colonies sent to Spain, and collected on their arrival in that country. This measure was followed by considerable commercial activity in Buenos Aires and Montevideo, where the exportation of leather, salted meats, and wool had already reached some importance.

In 1806, an English fleet, under Commodore Popham, appeared before Montevideo, but, finding the place prepared for attack, proceeded to Buenos Aires, which was captured without much resistance on the 27th of June. The whole English force consisted of 5 vessels and only 1,500 men, and the slight resistance offered by the viceroy has been imputed to cowardice. The indignation excited by the surrender made it easy for Capt. Santiago de Liniers to collect a body of about 3,000 men for the recapture of the place. He attacked the English in Buenos Aires, who were under the command of Gen. Beresford, and after a fierce struggle, forced them to surrender on August 12, 1806. The news of the capture of Buenos Aires by Popham having reached England, it was determined to complete the conquest of the country, and a fleet with a force of 5,300 men was dispatched under Rear Admiral Sterling for the Plata. On their arrival, however, affairs were completely changed by the recapture of the city. Sterling made no attempt to carry out the object of the expedition.

Another fleet was sent out by the British Government with 11,180 men under Gen. Whitelocke, and in the meanwhile, Popham, who had remained in the river threatening the eastern shore, attempted to capture Montevideo, but was repulsed and retired to Maldonado. In January, 1807, a reënforcement having arrived, a second attack was made on Montevideo with 4,600 men, and on the night of February 2, after a vigorous assault by land and by sea, the city was taken by the English forces. Soon after this, the combined

English forces in the river, under command of Gen. Whitelocke, made an attack on Buenos Aires, but were disastrously defeated, and, withdrawing from Montevideo, abandoned the Rio de la Plata.

Having successfully defended their soil from invasion, the people of the country had learned their own strength and were prepared to take their government into their own hands. On the 25th of May, 1810, the people of Buenos Aires, repudiating the authority of the Viceroy, chose a council to which they intrusted the conduct of public affairs; and this step was the beginning of the struggle that was to end with the extinction of Spanish dominion in South America.

A revolutionary party arose in Uruguay, at whose head was José G. Artigas. He left for Buenos Aires for the purpose of organizing a movement for the liberation of the Banda Oriental, and in April, 1811, appeared in that region with an armed force, to which rallied many of the inhabitants. On the 26th of April, Artigas routed a Spanish force of 600 men in San José, and on the 28th of the following month, gained a great victory over the Spanish army at Las Piedras. After varying fortunes and a succession of victories and defeats, the Uruguayans succeeded in expelling the Spaniards from their country, and a confederation of the provinces of the Uruguay was formed under Artigas, who was styled the Protector.

The country was not, however, long to enjoy its hard-earned independence. The Portuguese had never renounced their claim to the country up to the Plata, and at the invitation of certain malcontents, a force was sent from Brazil to overthrow Artigas. After a campaign of hard fighting it succeeded in capturing Montevideo. Maldonado was taken by a Portuguese fleet, but the country, for the greater part, still remained true to Artigas.

The Portuguese held possession of the places they had taken, and when, in 1822, Brazil became independent of Portugal and

the Empire was proclaimed by Dom Pedro I, Uruguay was formed into the Cisplatine province of Brazil. Artigas continued the struggle against the invaders and revolting chiefs in his own party until, overcome by the superior force of his adversaries, he was forced to take refuge in Paraguay, where he remained until his death in 1850. The liberator of Uruguay and fervent patriot never returned to his native country.

The political condition of Uruguay was not yet settled. In April, 1825, a band of thirty-three Uruguayan refugees left Buenos Aires and entered Uruguay with the hope of provoking a revolt against its rulers. Many of the inhabitants joined them and soon they were able to successfully engage a Brazilian force at San Salvador. The movement gaining strength, the insurgents proceeded to elect a constituent assembly, which met at Florida August 23, and issued a declaration of independence. The revolution gained strength. On September 24, the Brazilian cavalry was cut to pieces at Rincon, and on October 12, again defeated at Sarandí. The Brazilians were reduced to the garrisons of Montevideo and Colonia. The Argentine Government intervened, declaring that the latter province belonged to Buenos Aires, and the Brazilians declared war on that Republic, and sent a fleet which blockaded Buenos Aires. Admiral Brown, who commanded the Argentine flotilla, was repulsed in an attack on the Brazilian fleet on the 9th of February, 1826, and sustained heavy losses in an attempt on Colonia shortly after. On the 30th of July, the Brazilian Admiral Lobo gained an important victory over Brown, but an expedition sent by the former into the Uruguay River was annihilated by the latter early in February, 1827.

The Brazilian general, the Marquis of Barbacena, lost the battle of Ituzaingo on the 20th of February, and the bad conduct of the campaign by the Brazilian officers rendered the war unpopular in the Empire, and on the 27th of August, 1828, by a convention concluded by the mediation of England, both Brazil and the

Argentine renounced their claims to Uruguay, and created the Oriental Republic of the Uruguay. A constituent assembly was held, and on the 18th of July, 1830, it proclaimed the autonomy of the nation. The independence of the Republic was guaranteed by Brazil and the Argentine; but the long period of intestine strife could not end at once, and the struggle for ascendency between the "Colorados" and the "Blancos" kept the country in turmoil and stained it with bloodshed in the strife of ambitious military and political chiefs.

In the Argentine country, a similar condition prevailed under the dictatorship of Juan Manuel de Rosas, who espoused the cause of Gen. Oribe in Uruguay, joined forces with him, and reduced the government of that country to the city of Montevideo, to which Oribe laid seige in 1842. The English and French made an ineffectual effort to overthrow Rosas, but it was not until 1852 that a Brazilian force under the Duke of Caxias, in the battle of Monte Caseros, put an end to the power of the ambitious chief, who, fleeing the country, took refuge in England.

A period of comparative quiet and peace continued up to 1862, when Flores, an ex-President of the Republic, invaded the country and began a civil war, supported, as chief of the "Colorado" party, by Brazil. A Brazilian force joined with the army of Flores, captured Paysandú and laid siege to Montevideo, which was at same time blockaded by an imperial fleet. The allied forces entered the capital February 25, 1865, and Flores was established provisional ruler of the country. The Republic of Uruguay now became allied with Brazil in the war declared by the latter country against Francisco Solano Lopez, Dictator of Paraguay. In this war, which lasted until March, 1870, the Uruguayan forces numbered about 2,000 men, and Gen. Flores distinguished himself by the complete victory gained by him over a division of the Paraguayans at Yatay on the 17th of August, 1865.

In 1866, Vidal was elected President of the Republic, and in

February, 1868, Gen. Flores was assassinated during an insurrection at Montevideo, and ex-President Berro, who, though not one of the assassins, was arrested in the street with arms in his hands, was executed along with others who had taken part in this insurrection of the Blancos. In the same year, Gen. Lorenzo Battle assumed the Presidency, and in 1870, another revolution broke out, whose issue was not decided until 1873, when, by the triumph of the Colorados, José Ellauré was elevated to the Presidency. He was, however, subsequently deposed by his own party, and in 1875, Pedro Varela was chosen, who continued in office until March of the following year, when he was forced to resign and was succeeded by Gen. Latorre, who proclaimed a dictatorship.

Since that time, the country has enjoyed comparative quiet. The political agitations have lost much of their bitterness, and the people seem less inclined to sacrifice themselves and their welfare to the ambitions of military leaders. The Republic appears to have entered upon the path of constitutional progress and the régime of law and order. The presidents of later years have exhibited wisdom in government under difficult circumstances and a patriotic ambition to advance their country's welfare rather than their personal interests, and as the nation emerges from the cloud which a great financial storm had gathered over it, it can look to a future bright with prosperity and find in its promise the courage that is equal to the demands of modern civilization, and the energy that shall not falter in the work of building up a great republic on the banks of the Uruguay.

Chapter III.

POLITICAL ORGANIZATION.

The supreme political power resides in the people and the constitution is the present expression of its will. The form of government is republican and the delegated power of the nation is vested in three coördinate and independent branches—the legislative, the judicial, and the executive.

The legislative branch is composed of two chambers, the Senate and the Chamber of Deputies. The Senate consists of one member for each department, or province. The Chamber of Deputies is formed by one member for each 3,000 voters. The Congress thus constituted has the power of making laws; establishing courts and regulating the administration of justice; caring for the welfare, peace, and independence of the Republic, the protection of individual rights and the promotion of education, agriculture industry, and commerce; making appropriations for the support of the Government, establishing the taxes necessary for meeting these expenses, approving or disapproving, in whole or in part, the accounts presented by the Executive; contracting public debts, and, in general, regulating the public credit; declaring war, and approving or disapproving treaties of peace, alliance, and commerce, or any other which the Executive may make with foreign nations; fixing each year the number of the armed forces of the nation, land and naval, needed in time of peace or war; creating new departments, or provinces, establishing ports and custom-houses and import and export duties; fixing the weight, fineness, and value of coins, their kind and denomination, regulating the system of weights and measures; permitting or prohibiting the entry of foreign troops

into the territory of the Republic, and, in the former case, determining the time when they should leave the country; creating or abolishing public offices, determining their duties, and salaries; granting pensions or pecuniary or other rewards; bestowing public honors for great services; granting pardons or amnesties in extraordinary cases, by a vote of at least two-thirds of the chambers; making regulations for the national militia, and the time of their assembling, and their number; appointing the place of residence of the chief authorities of the nation; approving or disapproving of the creation of new banks, or the constitutions and rules of those already established; choosing in joint session the person who shall exercise the executive power and electing the members of the High Court of Justice.

The judicial power is vested in several courts of first instance, and in a High Court of Justice; but as the latter has not been established as yet, its functions are performed by the respective Courts of Appeals. There are 3 civil courts for ordinary cases, 2 for commercial cases; 1 for cases affecting the Treasury; 2 criminal courts; 1 police court; and 19 local or departmental courts. There are also justices of the peace elected by the people.

The executive power is vested in the President, chosen for a term of four years, by a majority of the General Assembly or Congress in joint session of its two chambers. He is ineligible for reëlection during the two successive terms. He is aided and advised in the execution of his official duties by a cabinet composed of five ministers. The following decree, dated February 6, 1891, will show the different ministries and their respective functions:

ARTICLE. 1. The cabinet offices spoken of in article 85 of the Constitution, shall be five, and shall be denominated Ministry of Government, Ministry of Fomento (Promotion of Public Welfare), Ministry of Finance, Ministry of Foreign Affairs, Ministry of War and of the Navy.

ART. 2. To the Ministry of Government belong all matters relative to police, public safety, elections, justice, prisons, public beneficence, health, postal and telegraphic communication, and local and departmental government.

ART. 3. To the Ministry of Fomento belong all matters relative to instruction and public works, internal communication, immigration, colonization, agriculture, and industries in general.

ART. 4. To the Ministry of Finance belong all matters relative to Government expenses, collection of customs and internal revenue, accountancy, public credit, and the renting or selling of all kinds of fiscal properties.

ART. 5. To the Ministry of Foreign Affairs belong all matters relative to the diplomatic and consular corps of the Republic and to negotiations with foreign governments and with the Holy See. To this ministry is further entrusted all matters concerning the exercise of the national church patronage and the religion of the State.

ART. 6. To the Ministry of War and of the Navy belong all matters relative to the Army and Navy, the guarding of the coasts, administration of light-houses, and all fluvial and maritime regulations.

ART. 7. In case one of the ministers is prevented from acting for any cause on any particular matter, the President of the Republic shall indicate the minister who shall act in his place, and the orders thus given by this substitute shall be countersigned by the chief clerk of the ministry to which the matter originally belonged.

ART. 8. The secretaries of the ministries shall take charge of the archives respectively corresponding to the branches ascribed to each by the present decree.

ART. 9. Let this be communicated, etc.

HERRERA Y OBES.
A. M. FERRANDO.
ALCIDES MONTERO.
PEDRO CALDORDA.
OSCAR HORDEÑANA.
RAMON L. LOMBA.

There is a Vice President of the Republic, who *ex officio* is the President of the Senate, and who, in case of death or disability of the Chief Magistrate of the nation, acts in his place.

Congress meets annually and its sessions last from January to June.

Each Department or province of the Republic has a governor appointed by the Executive, and an administrative council, whose members are chosen by popular vote.

Foreign powers are represented in Uruguay by 16 ministers, 10 consuls-general, 24 consuls, 49 vice-consuls, and 17 commercial agents.

The Republic is represented abroad by 9 ministers, 18 consuls-general, 121 consuls, and 132 vice-consuls.

The religion established by the Constitution is the Apostolic Roman Catholic, but all other forms of worship are tolerated throughout the country in consequence of the liberality of the laws and tolerant disposition of the native inhabitants. This is evidenced by the existence of the English Protestant church in Montevideo, of an Evangelical church in the Swiss colony, and of the Protestant church in Salto.

The financial aid given by the Government to the Church is very limited, only $19,712 appearing in the annual budget for that purpose. The contributions of the faithful in the different parishes is sufficient for the maintenance of the priest and the church expenses. In 1889, the number of churches in the country was given as 43, 13 of these being in Montevideo. Seven others were in course of erection. The number of officiating priests in the various places of worship was 161. There are 5 organizations of Sisters of Charity, devoted to the instruction of children and to service in the hospitals and asylums of the country. They have 15 houses in the capital and 10 in the other departments. The number of Sisters of Charity belonging to the order is 280.

A religious seminary, with 28 teachers and 50 pupils, also exists in Montevideo.

The charitable institutions are well conducted and are under the charge of a special commissioner. During the year 1889, the Hospital de Caridad admitted 5,308 patients, of whom 4,016 were foreigners. The Insane Asylum had 898 insane persons in its care. The Orphan Asylum, the Asylum for the Aged, and the British Hospital are well-managed institutions, supported by public aid and private subscriptions.

By the terms of the constitution, all citizens of the Republic are equal before the law; no distinction is recognized between them on account of birth or wealth, but all possess the same right to protection in the enjoyment of life, liberty, security, and property. No one can be deprived of these except by due process of law. The creation and existence of rights of primogeniture are forbidden; all kinds of entail are prohibited, and no authority of the Republic can confer any title of nobility, honor, or rank. The private acts of men, which are in no way injurious to the public welfare or to each other, are beyond the notice of the courts; and no person can be compelled to do that which is not demanded by the law, or be prevented from doing that which is not prohibited. The house of the citizen is an inviolable asylum, and may not entered at night without his consent; or by day, unless by express order of a competent judge, given in writing, and in cases determined by the law. No one can be punished or confined without due form of law and by legal sentence. The private papers of citizens and their correspondence are inviolable, and shall not be examined or intercepted except in such cases as the law provides.

The expression of thought is free, whether by speech, private writing, or the press, and shall not be subject to censorship; but the speaker, author, or publisher is responsible for abuses according to the law. Every citizen has the right of petition to all and any of the authorities of the State. The security of the individual can not be suspended without the consent of the Legislative Assembly, or, when this is not in session, of the permanent commission, in extraordinary cases of treason or conspiracy against the State, and then only for the apprehension of the offenders. The right of property enjoyed by all, except subjects of foreign governments, is inviolable. In case the nation needs the private property of any individual, he must receive from the public treasury a just compensation for the same; and the same is the case for expro-

priation of private property for railway lines. No one is obliged to furnish aid to the army without an order from the civil magistrate, and indemnity shall be given for any loss sustained in obedience to such order.

The inhabitants of the country may pursue any occupation not injurious to the public welfare or to that of other citizens. Any person may freely enter the territory of the Republic, and his stay and departure are unrestrained as long as he observes the police regulations and injures no one.

In all treaties made by the Republic with foreign powers for the extradition of criminals political offenses are excepted.

The army of the Republic, on a peace footing, is composed of 3,200 private soldiers, commanded by 21 superior and 211 inferior officers. It is divided into 4 battalions of infantry, 4 regiments of cavalry, 1 of artillery, and the garrisons of Fort General Artigas and the National Park. Its organization is considered as excellent, its discipline good, and it is well instructed in drill and tactics. The infantry is armed with Remington rifles, and the armament of the artillery consists of 67 pieces of cannon and mitrailleuses. One battalion of the line and all the cavalry are stationed in garrisons in the different departments, the remainder being held at the capital.

The National Guard consists of about 20,000 men, and the Government could probably put a force of 35,000 soldiers in the field in case of emergency.

The navy consists of 3 gunboats and 5 small steamers. Of the former, the *General Artigas* was built in Trieste and the *General Rivera* was constructed in the works of the School of Arts and Trades. These vessels are manned by 227 men under 15 officers, the entire navy being commanded by 11 superior officers. The armament consists of 7 large guns and 7 mitrailleuses.

Chapter IV.

POLITICAL DIVISIONS.

The Republic is divided into nineteen Departments or provinces, as follows: On the Atlantic, Rocha; on the Rio de la Plata, Maldonado, Canelones, Montevideo, San José, and Colonia; on the Uruguay, Paysandú, Salto, Rio Negro, and Soriano; Artigas on the Uruguay and Brazilian frontier; Rivera, Cerro Largo, and Treinta y Tres, on the Brazilian border, and Durazno, Florida, Minas, Tacuarembó, and Flores, in the interior. Artigas is the most northern of these Departments and forms the extreme northwest angle, and below it, as the country broadens, are situated Salto and Rivera. To the south of these last, lie Paysundú, Tacuarembó, and Cerro Largo. Rio Negro, Durazno, and Treinta y Tres occupy the region to the south of these last, and below them, lie Soriano, Flores, Florida, Minas, and Rocha. Colonia, San José, Canelones, Montevideo, and Maldonado occupy the southern territory of the country.

Up to 1880, there were but thirteen Departments, but in July of that year, there were created by law the six additional ones of Rocha, Rio Negro, Artigas, Rivera, Treinta y Tres, and Flores.

Montevideo, the smallest of the Departments, is the most populous, although it possesses an area of only 256 square miles. Its capital is the capital of the Republic. It occupies the southernmost part of the national territory and lies along the Rio de la

Plata. The population is generally concentrated in and around the capital, while a large part of its territory is but very sparsely inhabited and almost uncultivated, consisting, however, of beautifully undulating prairie lands, capable of sustaining a population many times as great. The Department, as far as yet known, possesses little or no mineral wealth.

Montevideo, the capital of the Department and of the Republic and the commercial emporium of the country, was founded in 1726. Its growth has been occasionally interrupted by civil wars and foreign occupations, but has, in the main, been continual. Its population in 1892, as officially given, is 238,080 inhabitants, thus having increased enormously, from 3,500 in 1818 and 9,000 in 1829. Until 1834, it was little more than a fortress, whose walls had withstood many a siege, but when these were demolished, the area of the city began to expand, new streets were opened and new squares laid out. In 1838, its population received a new impulse from foreign immigration which began at that time. It unfortunately occupied territory whose possession was disputed by the English, by the Argentines, and by the Brazilians, whose forces at various times occupied the city. The arrival of some 1,400 French and Italians in 1836 was followed by a current of immigration which contributed to the more rapid growth of the city and country. From 1838 to 1841, 28,245 Europeans immigrants are estimated to have entered the port.

The city in its extension beyond the ancient walled limits absorbed the adjacent villages, and its growth in population was correspondingly rapid, although not so great as to reach in 1860 more than 45,000 inhabitants. In 1872, however, the population had increased to 105,000, being an increase of 133⅓ per cent in twelve years.

The port or harbor of Montevideo is the best on the Plata. An elaborate and costly system of moles and docks for the shelter and accommodation of vessels has been projected. The plans include

the reclamation of a considerable area of land from the sea, as a valuable site for the building of warehouses and stores. The cost of such improvements is estimated at $30,000,000, a sum nearly three times the entire customs revenue of 1888.

The entrance to the harbor is 4 miles wide and the water at that place is from 15 to 17 feet deep. In the outer roadstead, vessels of great draught find anchorage in water 25 feet deep, while within the harbor, the depth varies from 13 to 15 feet. The perimeter of the harbor measures about 6 miles. Vessels whose draught will not allow them to enter, discharge their cargoes outside on lighters.

The situation of the city, built on a chain of hills sloping gently to the shore, is favorable for efficient drainage, and the consequent cleanliness and salubrity. It overlooks the bay and the river, of which it commands a delightful view, and grand natural panorama, whose beauty consists not so much in marked diversity as in the harmonious blending of all its parts.

Being the capital of the Republic, Montevideo is naturally the center of political and social interest, whose activities are manifested in a degree only less than those that characterize its sole rival on the Plata. It is also the seat of the religious hierarchy of the country.

It has an active and increasing commerce with foreign countries and a thriving trade with the interior, and, being the only port of entry of importance, furnishes nearly all the revenue of the Government. The Montevideo Exchange and the French and Italian chambers of commerce are spirited centers of daily commercial transactions, and a Spanish chamber will soon be inaugurated.

About 90 per cent of the entire foreign commerce of importation is carried on through this port, and 67 per cent of the total exports of the country leave its harbor.

The following table exhibits the foreign commerce of the city during the ten years, 1880–1889:

Year.	Imports.	Exports.
	Dollars.	*Dollars.*
1880	17, 655, 451	11, 011, 271
1881	16, 530, 139	12, 865, 734
1882	16, 514, 588	12, 874, 216
1883	18, 713, 612	16, 090, 632
1884	22, 656, 103	14, 714, 982
1885	23, 644, 944	16, 692, 948
1886	18, 903, 247	15, 108, 025
1887	23, 322, 321	11, 822, 817
1888	26, 196, 344	19, 188, 427
1889	33, 476, 433	17, 415, 686

The above figures do not agree in some respects with those of certain other tables professedly official, but are believed to represent very closely the real movement of the commerce of the country during the period covered by them.

The customs revenues, which in 1880 amounted to only $3,677,531, rose in 1888 to $8,860,449, and to $10,622,000 in 1891. The greater part of the products which are exported are drawn from all parts of the country.

The public buildings of the city are well adapted for the purposes for which they were constructed, are of modern style of architecture, and generally of attractive exterior. Among them, may be mentioned the Parliament House, the Government Palace, the National Bank, the building of the Uruguay Club, the Lunatic Asylum, and the San Felipe and Solis theaters.

All the recent improvements of a modern metropolis are found here: Banking institutions, with abundant capital, commercial houses of every class, street railways, telegraphic and telephonic connections, extensive printing establishments, foundries, and workshops in general. The electric-light works, situated at the Arroyo Seco, supply the city with electric light.

In the environs, along the well-kept avenues, are beautiful res-

idences and suburban villas, surrounded by attractive grounds or gardens, and of varied and elegant styles of architecture. The roads leading to the city are well constructed and maintained, many of them being macadamized.

All the languages of the civilized world are heard in the streets and social circles of the capital, no city on the continent possessing a more cosmopolitan character, nor elsewhere are the different national elements more happily blended.

The streets are straight and wide and generally well kept. The city proper contains upwards of twelve thousand houses, of which about one-fifth are of three or four stories, and many handsome ones are in process of construction, for the city has at present a constant and steady growth.

The system of sewerage extends throughout the city, which is consequently well drained, and the water supply, obtained from the river Santa Lucia, about 12 miles from the city, is conducted to the different sections through mains whose total length is 112 miles.

On the elevated ground running through the middle of the city, are situated the plazas or public squares, sixteen in number, surrounded, for the most part, with sightly buildings. The most attractive among them are the Plazas de Zabala, Constitución, and Independencia.

As the seat of government Montevideo is also naturally the location of the leading educational, scientific, art, and charitable institutions of the Republic. The University of Uruguay has a faculty of twenty-seven native and nine foreign professors, and the medical faculty consists of eleven Uruguayan and eight foreign professors. The course of studies is extensive and the usual university degrees are conferred. Among the charitable institutions, may be named the Lunatic Asylum, the Orphans' Home, and the Hospital.

The new School of Arts, recently finished, is an immense structure, covering an entire square.

Among the five theaters, the most notable is the Solis, a large and beautiful building with seating capacity for 3,000 spectators.

Among the many banking institutions, may be mentioned the London and River Plate Bank, the English Bank of the River Plate, the Italian Bank, the Bank of Spain, and the French Bank.

About a league distant from the city, is a magnificent park, belonging to the municipality, called El Prado. It is adorned with beautiful groves and embellished with fountains and statues. It is much frequented by the populace of the capital, and is the favorite place for the festivities and celebrations of the local clubs and societies.

Mention should not be omitted of the three great dry docks, which admit the largest vessels for repairs.

At Villa del Cerro, reached by steamer or rowboat, some of the *saladeros*, where animals are slaughtered and meat packed for exportation, and the coaling stations can be visited.

Villa Colon, 6 miles from Montevideo, has a meteorological observatory, and Pocitos, a fashionable bathing place, is reached by tram cars running at intervals of ten minutes.

The Department possessed, in 1886, 11,382 landed properties, and an area of 61,587 acres of land under cultivation, and 38,513 uncultivated, the value of both being estimated at 94,510,882 pesos. During the year 1891, the sales of landed property in this Department exceeded three times the amount of those in the whole Republic in 1886. It may be remarked that two-thirds of said property is in the hands of foreigners. Twelve thousand nine hundred and thirty-seven taxpayers contributed to the municipal revenues, in 1886–'87, 494,107 pesos.

On the north lies the Department of Canelones, which, next to Montevideo, is the most important, as well as the most densely populated of the Departments. It covers an area of 1,834 square miles. It is crossed from east to west by a low chain of hills, but the rest of its surface is rolling. The soil is fertile, but the land

is poor in minerals; though in certain localities granite, slate, and other building stones are quarried. All the grains adapted to the latitude are successfully grown, and the production is greater than in any other part of the country. The raising of cattle has fallen off greatly from its former importance, when it was the almost exclusive occupation of the people. In 1887 it sent to the capital 18,775 head of cattle and 237 horses.

Villa Guadalupe, is the capital of the Department and the seat of its government. It is a town of about 3,500 inhabitants, 30 miles from Montevideo, on the Central Uruguay Railroad. Several flour mills are located at this place, and the town boasts of some fine buildings and a spacious public square.

About 5 miles off the coast is the island of Flores, belonging to this Department, where a quarantine hospital, or lazaretto has been established, connected by cable with Montevideo.

Pando and La Pàz are commercial and manufacturing towns of some importance, and eleven other small centers of population have each its church and free schools.

Las Piedras, noted for the victory gained by the patriots over the royalists in 1811, has an ostrich farm.

Santa Lucía, a bathing resort on the river of the same name, possesses many fine residences, a public library, and an establishment for pork-packing.

The Department of Maldonado, east of Canelones and lying on the Plata, has an area of 15,850 square miles, and a population of 15,757 inhabitants. It is crossed in different directions by several mountain chains, whose highest peaks measure no more than 1,575 feet in altitude, and by valleys well watered by numerous streams bordered with forest growth. The climate is temperate and salubrious, and the soil is fertile and well suited to agriculture. The capital, Maldonado, founded in 1763, is a naval station, and possesses some good buildings and a public school, Escuela Ramirez, which is considered as one of the best in the country. It has a

considerable coasting trade, and among other things supplies limestone to the capital, from which it is 60 miles distant.

In 1888, the entries of vessels in the harbor of Maldonado were 154, of which 34 were foreign, with a total tonnage of 16,916 tons.

There are four other towns in this Department, of which Villa de San Carlos is the largest.

The latest accessible statistics give the value of the real estate of the Department as 11,821,113 pesos, held by 4,693 proprietors. The municipal revenues for 1886–'87 amounted to 44,039 pesos.

There are several well-organized agricultural establishments, supplied with modern machinery, which have extensive tracts under cultivation. A large vineyard has been planted near Pan de Azúcar, and the Government and private enterprise have planted a few agricultural colonies, but by far the greater part of the land is uncultivated, tillage being confined to the vicinity of the towns.

In 1888, the number of neat cattle in the Department was estimated as 108,123; horses, 7,615; mules, 4,300; sheep, 277,372, and other domestic animals, 2,027.

The only indication of the business transactions is the number of licenses granted, which in 1888 were issued for 118 commercial houses and 206 other industries and branches of business. In the same year, there were entered at the port of Maldonado 2,211 tons of merchandise, and the exports were estimated at 6,995 tons.

Back of the town of Pan de Azúcar, on the coast, lies the mining district, in which several mines have been opened, the principal one of which, the "Oriental," has been extensively worked.

San José, another of the Departments of the southern group, lies on the Plata, between Canelones and Colonia. It has an area of 2,688 square miles.

A chain of hills traverses it from northwest to southeast. The

soil is fertile and well adapted to the raising of grain. Scattered over its surface, are the *estancias* for the raising of cattle, in the midst of the grass-covered prairies, where their herds find pasture.

The capital of the Department is San José, situated on a hill overlooking the river of the same name, and at about 57 miles from Montevideo, with which it has railroad connection. It possesses a historic interest derived from the victories of the patriots under Artigas, and during the war with Brazil in 1825, and 1826 it was the capital of the nation. Its population is about 7,000, and it possesses some fine buildings, among which is one of the most notable church edifices in the country. There are three small towns and three colonies in the Department.

Several mineral deposits of various kinds have been discovered, but have been but slightly worked. Among the minerals found there are iron, manganese, gold, copper, agate, and porphyry.

The low price of cereals and lack of means of transportation are chiefly responsible for the backward agricultural condition of this Department. The annual production of the leading crops is 116,700 bushels of wheat, 264,520 of corn, 6,224 of potatoes, and 20,000 watermelons.

The planting of several colonies in the Department has given a certain stimulus to agricultural development. The Paullier Brothers' Colony, two hours and a half journey from San José, occupies an area of 4,700 hectares, where about 400 cows are milked daily and cheese of the Gruyère kind is made. The milk is churned by machinery and the entire process and management are of the most improved sort. Flax, the vine, potatoes, tobacco, and the palma-christi are successfully cultivated by the colonists. The land is divided into 72 lots of 40 to 80 hectares each. This Department has 15 public and 32 private schools, with an attendance of about 2,000 pupils.

The Department of Colonia lies to the west of San José, on the Plata and the lower part of the river Uruguay, which sep-

arates it from the Argentine Republic. Its population in 1891 was estimated at 30,309, and its area is 2,193 square miles. The surface is gently undulating and is crossed from north to south by a range of hills. The land is well watered and the soil is fertile, producing ample returns for the labor bestowed on its cultivation.

Colonia del Sacramento, the capital, was founded by the Portuguese in 1680, as a military post, in assertion of their claim to the country up to the Plata, and in the changing fortunes of the strife between them and the Spaniards, passed alternately from the possession of the one to that of the other party. It was burned in 1705, taken by assault in 1762, and its fortifications razed in 1777. These were afterwards rebuilt and definitively demolished in 1859. The present population is about 3,000. Carmelo and Nueva Palmira are two other ports in this Department. The port entries of the former in 1887 were 2,175 vessels of an aggregate tonnage of 94,466, and of the latter, 2,032 vessels, of a total of 75,000 tons.

Colonia has two more towns of minor importance and several flourishing agricultural settlements, among which the most notable are the Vaudois Colony founded in 1858 and the Swiss Colony or Nueva Helvecia, founded in 1863. The Vaudois Colony consists of about 15,000 hectares, containing 2,200 inhabitants. The colony possesses 8 schools, 1 post-office, 2 churches and 1 public library.

The Swiss Colony forms, with the Quevedo and the Spanish Colonies, a district of 17,371 hectares. All these colonies have attained a reasonable degree of prosperity, which doubtless would have been much greater, but for the low price of cattle and cereals, which has retarded agricultural and pastoral development throughout the country.

The chief products are pastoral.

The other colonies are: the Cosmoplitan, the Star, the Arrúe, the Claré, the Belgrano, the Sauce, and the Riachuelo, all of

them founded in 1869, except the Cosmopolitan which dates only from 1875.

North of Canelones, between Flores and Minas, lies the Department of Florida, whose area is 4,740 square miles and population, in 1891, 29,078. It suffered severely in the civil wars from 1830 to 1867, and is still infested by lawless bands. Timber is not abundant, but water is plentiful and the pastures are rich in grass. The surface is undulating and is broken by several ranges of hills that cross it from north to south. A large tract of land, including several large *estancias*, was bought in 1825 at about 8 cents per acre, and now belongs to a single person. At these different *estancias*, 300,000 sheep are annually shorn.

The capital, Florida (or San Fernando), is situated on the Central Uruguay Railway, about 70 miles from Montevideo, near the Arroyo Pintado, which is crossed by a railroad bridge 570 feet long. It has 2,500 inhabitants, a church and schools, and is surrounded by attractive plantations and country residences. The first legislature of Uruguay assembled here in 1825. The other centers of population are small and unimportant. Among them may be named: 25 de Agosto, 25 de Mayo, La Cruz, and Sarandí. About 4,100 acres are under cultivation in the Department, and on the various *estancias* were owned, in 1887, 175,881 horned cattle, 1,768,037 sheep, and 14,334 horses. The value of the property in the Department in the same year was stated at 10,262,222 pesos. In 1891, 1,945 pupils received instruction in 20 public and 8 private schools, and an agricultural institution has been recently established by the Government of the Department.

The Department of Minas is situated to the east of Florida, and has an area of 4,880 square miles. Its population is 22,500, many of whom are wild and lawless. Its surface is composed of successive mountain or hill ranges, between which lie green and fertile plains. The northern portion, near the basin of the Cebol-

lati, is particularly mountainous. As its name indicates, this Department is supposed to be exceedingly rich in mineral deposits, among which are gold, silver, copper, lead, iron, coal, porphyry, slate, quartz, crystal, etc. The mines worked by the Spaniards in the last century for silver proved to contain lead sulphide. The existence of coal of any value is problematical. There are, however, valuable quarries of slate, and talc, plaster, and sulphur are extracted. The formation of many of the hills is calcareous, and fine marbles and excellent limestone are obtained from them.

Minas, the chief town, was founded in 1783 by a colony of forty Spanish families. Its situation is picturesque, and it has a population of 5,000. It has a gristmill, belonging to a Frenchman, and the suburbs of the town produce annually about 200,000 bushels of grain. Certain caves near the town are worthy of the visitor's attention. One of them, the Salón, is 200 feet long by 50 high, and from it flows a clear stream to the valley below. The Pillar Cave is said by tradition to have been made in the last century by the Indians.

There are two other villages, Solis and Nico Perez, the former of which is on the road to Maldonado, and the latter on the railroad to Treinta y Tres. About 30 miles northwest of the capital, is the agricultural colony of Igualdad, the only one in the Department. In 1886, it was estimated that there were 7,500 acres of land devoted to agriculture, the greater part being in grain. The most of the land is pasture, and in 1887, there were said to be in the Department 291,646 neat cattle, 982,923 sheep, and 23,667 horses. In 1891, there were 17 public and 9 private schools in the Department, and the number of pupils was officially reported as 1,220.

The northern central portion of the Republic is occupied by the largest of all its Departments, Tacuarembó. Its area is 8,210 square miles, and its population 22,400. It is traversed in different directions by mountain chains, and the surface is generally

broken and the country wild, but well watered. Agriculture is hardly known, and the inhabitants devote themselves for the most part to pastoral pursuits for which the pasture lands, rich and fertile, are admirably suited. Many of the *estancias* belong to Brazilians, who form about 40 per cent of the land-owners in this Department. Beautiful white marble is found in some of the hill ranges, and in the eastern part, basaltic and porphyritic are abundant. In 1886, scarcely 2,000 acres of land were reported as under cultivation, and more than two-thirds of the entire surface was devoted to grazing, there being reported 677,678 neat cattle, 1,040,153 sheep, and 47,220 horses.

Tacuarembó, otherwise called San Fructuoso, the capital, is a well-built town of 3,000 inhabitants, and has a church, schools, a hotel, and enjoys considerable frontier trade. It is connected by railway with Montevideo, from which it is distant 285 miles. San Gregorio and Santa Isabel are thriving towns. The former was founded by Gen. Suarez in 1860, and is situated on the right bank of the Rio Negro. It is also a station on the Northern Extension Railway. Santa Isabel is also situated on the Rio Negro, near the Paso de Toros, where the Central Uruguay Railway has large workshops. From this point, one line of railway goes to Salto and another to Rivera. The taxable property of the Department in 1886 was given as 12,191,994 pesos, on which 2,414 proprietors paid taxes. In 1891, there were twenty-four schools reported, with an attendance of 1,556 pupils.

The Department of Rivera lies to the north of the last described, along the Brazilian frontier. It was created in 1884 by taking a portion of the Department of Tacuarembo, and has an area of 3,792 square miles, and a population estimated in 1887 at about 19,000. The surface is generally rolling, with chains of hills in the northwest and southeast. In some of these, gold-bearing quartz exists. Some years ago, a strong French company began with extensive and expensive preparations to work the gold de-

posits at Cuñapirú, but with unsatisfactory results for a long time, though at present with improved means of transportation and less lavish expenditures, the prospects of the company are brighter.

In the same region, a new English company, called "The Gold Fields of Uruguay," is at work, and in 1870, produced gold to the value of $52,710,

An extension of the Central Uruguay Railway, which is now under construction, will pass through this mining region, and will doubtless aid greatly in its development. Besides gold, platinum, silver, copper, lead, iron, cobalt, and antimony are said to be found. This would seem to be an inviting field for foreign mining enterprise. Agate, marble, manganese, and opals are known to exist in this Department.

The soil is light, and the surface well watered by the abundant mountain streams. In some parts, excellent pasture lands are found. The vine and strawberry plant flourish on the uplands, and the cherry, the chestnut, the poplar, and orange tree abound. The capital, Rivera, is situated in the north, close to the frontier of Brazil, with which country it has considerable commerce. Its population is about 1,000.

The cereals are cultivated to some extent; the raising of cattle occupies the attention of a large part of the population. The latest available statistics give to the Department 428,444 head of neat cattle, 34,719 horses, and 292,341 sheep. One thousand four hundred and seventy-six proprietors paid taxes on landed property to the value of 6,853,585 pesos. In 1891, there were officially reported nineteen public schools in the Department, with 1,125 pupils of both sexes. The abundant and diversified resources of Rivera would appear to constitute sufficient inducement for a considerable immigration.

The Department of Artigas, the most northerly situated of all, lies along the Cuareim River, which separates it from the territory of Brazil. Its area is 4,393 squares miles, and a census made in 1887 gave its population as 17,652, of whom 11,457 were

Uruguayans, 4,057 Brazilians, and 1,048 Italians. Its surface is broken by numerous chains of hills, between which lie valleys of great fertility, and along the numerous streams, building woods are found in abundance. The capital, San Eugenio, on the Cuareim, has about 2,000 inhabitants and considerable commerce with Brazil. Santa Rosa, on the Uruguay, and the port of the Department, has some 2,000 inhabitants, and is connected by rail with Salto and other towns to the south. The tonnage of its port movement in 1887 was 6,135. There are several other villages of less importance; and in 1884, the colony General Rivera was founded with 100 families, who cultivate grain and tobacco. The most recent accessible statistics estimated the property of the Department at 10,093,398 pesos, with 1,259 taxpayers. Its schools, twenty public and six private, had, in 1891, an attendance of 1,118 pupils.

The western group of Departments, lying along Uruguay River, is composed of Salto, Paysandú, Rio Negro, and Soriano. The first covers an area of 4,865 square miles and lies to the south of Artigas. Its population is variously estimated at from 19,000 to 24,000, and a recent census made by the head of the Department gives the number as 30,952, which is probably more nearly correct. The surface in the west is level, in the interior undulating, and in the east rocky and broken. Various minerals abound, as agate, sardonyx, chrysophase, and others are found and sent to Montevideo and thence exported, for the most part to Germany. The Department is crossed by several low mountain chains, and the river Arapey, which has numerous affluents from the south, flows across it to the west and empties into the Uruguay. The soil is generally fertile, but the leading occupations of the people are pastoral. In several agricultural colonies, the cereals are raised, and considerable attention is given to the cultivation of the grape. Salto, the capital, is situated on the Uruguay, opposite the Argentine port Concordia. It possesses several well-built public edifices,

two spacious open squares, a theater, several colleges and schools, manufactories, and commercial houses. As vessels of heavy draft can not ascend the river above Salto, the place has become a landing and shipping point of considerable importance, much merchandise for and from Brazil passing overland through this port. Constitución and Belén are the most important of the smaller towns.

The number of neat cattle in the Department was last estimated at 489,015; horses 16,360, and sheep 233,224. The taxable property is put at 16,533,505 pesos and is owned by 2,426 taxpayers. In 1891, there were 33 public and private schools in the Department, attended by 2,782 pupils. The entries in the port of Salto in 1887 were 371 steamers, with a total tonnage of 176,565; 295 sailing vessels of an aggregate of 9,302 tons. The clearances were 369 steamers of 177,557 tons, and 284 sailing vessels with a tonnage of 8,471. The imports in the same year amounted to 440,696 and the exports to 577,125 pesos.

The Department of Paysandú, which lies next to Salto on the south, has an area of 5,116 square miles and had in 1887 a population of 28,417. The surface is generally undulating, and in the north and south, is broken by ranges of hills. The soil is adapted to the cultivation of cereals, vegetables, and fruits, being loamy or of a calcareous nature. The climate is mild and salubrious, like that of the neighboring Departments, and the country is well watered by the river Queguay with its many branches.

The mineral wealth of Paysandú is said to be considerable and varied. Gold, silver, copper, iron, lead, marble of several varieties, agates, chalcedony, and carnelian are found. Numerous quarries furnish large quantities of excellent building stones, which are exported to Buenos Aires. Paysandú, the capital, is situated on the Uruguay, 131 miles above Montevideo. It is considered to be the third city in importance in the Republic. Its streets are lighted by gas and are well drained, and it has street cars for passengers and merchandise.

Among the more notable buildings, are a hospital, two churches, a large theater, and a public library, and it has several clubs and other social and industrial societies. It is in telegraphic communication with Montevideo and other points of the country. Its harbor is visited by foreign vessels, and in 1887, the entries and departures were 1,452 steamers, with an aggregate tonnage of 807,640, and 1,066 sailing vessels of 25,137 tons.

An agricultural colony, with a population of 1,396, has been established near the capital, with a tract of about 10,000 acres under cultivation. It is divided into 256 farms, and has 4 mills, 664 dwellings, 2 brick works, and other buildings. The establishment of an extensive meat-packing establishment on the Uruguay, above Paysandú, has created the town of Guaviyú, which is composed of the dwellings of the workmen, and has postal facilities and communication by river with the capital.

The amount of property subject to taxation in 1887 was 16,466,316 pesos, and the number of proprietors was stated as 2,726. The total imports of the Department amounted to 298,881 pesos, and the exports were stated as 2,478,444 pesos. The greater part of the exports was of pastoral products.

In 1886, the animal wealth of the Department consisted of 646,485 horned cattle, 628,215 sheep, and 33,709 horses.

In 1891, the thirty-three public and private schools of this Department imparted instruction to 2,827 pupils.

The Department of Rio Negro is situated on the Uruguay, immediately south of Paysandú. Its area is 3,270 square miles, and its population in 1887 was 14,265. Its southern border is the Rio Negro, so that it enjoys facilities for river navigation along about half its entire perimeter superior to those of any other Department. Although it has no mountains, several chains of low hills give diversity to its surface, and the valleys between them afford much excellent land for cultivation and pasturage. The interior is chiefly composed of *campos*, or plains, which afford

superior grazing. Among the mineral resources of the Department, iron, lead, and copper are said to exist.

Independencia, more commonly known as Fray Bentos, is the capital and seat of the Liebig establishment for the preparation and exportation of extract of meat. The population of the town is about 5,000, many of whom are employés in the Liebig works. From 1,000 to 1,200 cattle are slaughtered daily during the seven months of the killing season, and since the establishment of the works, about 3,000,000 animals have been slaughtered in its abattoirs. About 8,000 tons of coal and 4,000 of coke are annually consumed. The company has its own wharves and ships its products directly for Europe. Vessels ascending the Uruguay usually stop at this port, and in 1887, the number of steamers touching there was 1,082; sailing vessels 286, the aggregate tonnage of all being 465,855.

To the northeast of Fray Bentos, on the Uruguay, is the town of Nuevo Berlin, which is the center of a German agricultural settlement established in 1874. In 1886, the total property of the Department was estimated at 10,458,581 pesos. There were 379,352 neat cattle, 883,905 sheep, and 19,825 horses. The imports at Fray Bentos are stated to be about 200,000 and the exports are estimated at 2,300,000 pesos. There were in 1891 in this Department 13 public and 8 private schools, with an attendance of 1,279 pupils.

Next to Rio Negro to the south, and on the Uruguay River, is the Department of Soriano. It is separated from the former by the Rio Negro, and has therefore river navigation on two of its sides. Its area is 3,561 square miles and its population is about 27,000. The surface is undulating, broken here and there by ranges of hills and watered by numerous streams. The greater part of the land is devoted to grazing. Two agricultural colonies have been established in the Department, but no statistics in regard to them are accessible.

Mercedes, the capital, is situated on the Rio Negro, about 30 miles from its juuction with the Uruguay. It is picturesquely situated and contains some fine buildings and public places. The population is claimed to be 9,000. Although it can be reached only by vessels of light draught, it has considerable commerce, and in 1887, its port entries were 604 steamers and 304 sailing vessels, with an aggregate of 376,854 tons.

The port of San Salvador is situated on the river of the same name, south of Mercedes. It is accessible by vessels drawing 6 or 7 feet and the entries and clearances for the year 1887 were 844 vessels of 113,157 tons.

Soriano, a small town on the Uruguay, is the oldest settled place in the Republic, having been founded in 1624. An old Indian cemetery is near the town, and from it have been obtained interesting specimens of the pottery of the aboriginal inhabitants of the country. Among the mineral resources of the Department, iron, copper, lead, silver, and coal are said to have been discovered, but little definite is known as to the deposits of these minerals. The official statement of 1886 placed the property valuation of this Department at 12,463,065 pesos. There are about 23,000 acres of land under cultivation and upwards of 400 *estancias*, with 321,707 horned cattle, 2,299,303 sheep, and 30,660 horses. The total imports in 1887 were stated at 79,094 pesos and the exports were estimated at 239,286 pesos. In 1891, the number of public and private schools in the Department was 29 and the attendance was 2,144.

The eastern group of Departments is composed of Rocha, Treinta y Tres, and Cerro Largo.

The first of these is in the southeastern part of the country, on the coast of the Atlantic. Its area is 4,281 square miles, and its population was estimated at 17,549 in 1889. The northern portion is covered by low, wet lands, called bañados, unfit for agricultural purposes, and in the southern part are extensive lagoons;

but the remainder of the surface consists of low plateaux and hills, in which lead, copper, iron, marble, jasper, and other minerals are said to be found, though none of the deposits are worked to any extent.

The capital, Rocha, is situated in the southern part, near the lagoon of the same name, and has a population of about 6,000. Its port, which is about 4 leagues distant, has some commerce. There are no other important towns in the Department, but there is an agricultural colony, Santa Teresa, established near the coast, which occupies about 50,000 acres of land. The leading occupation of the people is stock-raising. In 1886, there were estimated to exist in the Department 247,857 neat cattle, 511,278 sheep, and 20,159 horses. There were in 1887 only 505 pupils attending the public schools, but there were also eight private schools with a fair attendance. The commerce of the Department is limited and is conducted mainly with Brazil. The value of the landed property was, by the latest estimates, 6,779,329 pesos, and the number of tax payers 2,557. There were produced in this Department, in 1891, 17,298 bushels of beans and pease, 11,620 bushels of potatoes, 107,630 watermelons, 265,825 pounds of cheese, and 17,000 pounds of butter. There were harvested 84,512 bushels of wheat and 138,393 of Indian corn.

North of Rocha, is the Department of Treinta y Tres, so named from the number of persons composing a revolutionary movement in 1825. It was formed of sections taken from the adjoining Departments of Minas and Cerro Largo. Its area is 3,687 square miles and its population in 1887 was estimated at 15,748. It embraces one of the richest and most fertile regions of the country, the soil being of remarkable fertility and the surface watered by considerable streams and sufficiently well wooded.

Lead, copper, porphyry, and granite are found in certain parts, but the lack of laborers has prevented any systematic working of these deposits.

There were produced in the Department, in 1891, 49,893 bushels of wheat. The attendance at the public schools in 1891 was: Males, 1,160; females, 220. The capital, Treinta y Tres, is the only considerable center of population in the Department. It contains upwards of 3,000 inhabitants, several schools and industrial establishments, and is the center of a considerable trade. The number of neat cattle, according to the latest accessible statistics, was 371,427; sheep, 575,990, and horses, 22,790.

The value of taxable property was stated as 7,170,052 pesos, many of the proprietors being Brazilians.

The Department of Cerro Largo occupies the extreme northeast portion of the country, bordering on Brazil. Its area is 5,754 square miles, and the most recent statement of its population puts it at 19,697, though by some as many as 28,000 are claimed for it. The surface is somewhat mountainous, and lead, copper, granite, porphyry, and coal have been discovered in certain districts. The greater part of the population is engaged in stock-raising, possessing, in 1886, 660,936 horned cattle, 551,920 sheep, and 34,445 horses. Many animals are sent into Brazil, amounting in value to 106,500 pesos in 1887. In the same year, the total exportation from the Department amounted to 623,030 pesos.

The most recent estimate of private property in the Department gives 3,405,565 pesos for 2,226 proprietors. The landed property was estimated at 11,440,507 pesos, on which taxes were paid by 2,966 proprietors, of whom 1,294 were Brazilians. Melo, the capital, is connected by telegraph with Jaguarão on the Brazilian border, where the telegraph system of Uruguay joins with the Brazilian system. Its population in 1887 was about 6,000. The town of Artigas on the river Yaguaron, opposite Jaguarão, has some 3,000 inhabitants, largely of Brazilian origin. In 1891, the Department had 45 public and private schools with 2,696 pupils.

The Departments of Durazno and Flores are situated in the

central part of the Republic; Durazno is the most central and the third in size in the country, having an area of 5,527 square miles, with a population which, in 1887, was estimated at 22,403. It is divided by a range of hills into two sections or basins, one of which extends to the Rio Negro on the north and the other to the river Yi, which forms the southern boundary of the Department. From this central chain of hills, flow numerous streams to the north or south, so that the whole surface is well watered. Most of the land is devoted to grazing; and in 1886, there were 576,714 horned cattle, 2,430,130 sheep, 32,802 horses, and 2,333 mules among the domestic animals reported from the Department.

Durazno, the capital, is situated in the southern part, a short distance from the river Yi. Its central position in the Republic and its situation on the Central Uruguay Railway, of which it is one of the principal stations, give it considerable commercial importance. It possesses some well-constructed buildings, a church, hotels, commercial houses, and industrial establishments, and near it is a fine bridge, over which the railroad crosses the Yi. Its population is about 2,000.

Sarandí, Nuestra Señora del Carmen, Farruco, and Polanco are other places of minor importance in this Department. The Department suffered severely from the civil wars and owes the revival of its prosperity to the opening of the Central Uruguay Railway. Some minerals, as marbles and sulphur, are said to exist within its limits. Its taxable property was estimated in 1886 at 10,906,087 pesos. There were, in 1891, 20 public and 14 private schools, with an aggregate attendance of 1,491 pupils.

The Department of Flores was formed in 1885 from a portion of San José. Its area is only 1,760 square miles and its population is estimated at 15,300. It is situated south of the rivers Yi and Negro, and its surface is broken by the hill chains of Porongos and Marincho. In agricultural importance it ranks fourth, having 100 square miles under cultivation and many rich pastures grazed

by cattle and sheep. In 1887, it sent to Montevideo 18,100 neat cattle and 24,632 sheep. Its wool production was estimated at 350,000 pesos, and the aggregate value of its annual pastoral production is 500,000 pesos. The production of wheat in 1891 was about 5,000 bushels. It possesses numerous fine granite quarries and marble deposits. Slate is also found, and iron, copper, plumbago, and limestone are sent from the Department to Montevideo in considerable quantities.

Trinidad, also called Porongos is the capital. It is situated on the right bank of the river Porongos and has a population of about 4,000, a church, schools, printing office, hotels, many fine stores, and a club. In 1891, there were in the Department 14 schools, with 850 pupils.

The following table exhibits the area and approximate population of the different Departments:

Department.	Area.	Population.
	Square miles.	
Salto	4,270	32,827
Artigas	3,855	17,367
Paysandú	4,490	29,962
Rio Negro	2,870	15,970
Soriano	3,125	32,617
La Colonia	1,925	39,309
San José	2,359	26,528
Flores	1,531	13,737
Montevideo	225	234,688
Canelones	1,610	64,772
Maldonado	1,391	15,757
Rocha	3,757	22,237
Cerro Largo	5,058	25,741
Treinta y Tres	3,232	17,297
Minas	4,230	23,466
Tacuarembó	7,120	25,166
Rivera	3,330	16,629
Florida	4,102	29,078
Durazno	4,850	25,020
	63,330	708,168

These 19 departments contain 7 cities, 48 towns, and 39 villages and colonies.

Chapter V.

THE RESOURCES OF URUGUAY.

To no other country in the world has nature been more lavish of her favors than to the Eastern Republic of the Uruguay; nowhere has she gathered or distributed more favorable conditions of life or national prosperity than in the comparatively small Republic to which she has appointed as boundaries three fair rivers and a sunny sea. On her fertile plains grows the pasture for the countless herds that up to the present constitute the chief national wealth; in her valleys and on her hills are mingled the vegetations of the tropics and the temperate zones, and in the bosom of her mountains lie the stores of mineral wealth which are to contribute to the greatness and activity of her future. The luxuriance of the vegetation is rivaled only by its variety, and the only limit for centuries to the production of the soil is the amount of labor that can be devoted to its cultivation, and the scarcity of which hitherto has been the chief obstacle to the development of the boundless resources of the country.

Unfortunately, too little attention was given in former times to the gathering and publishing of statistics, so that any comparative exhibit of agricultural, commercial, or industrial operations must be unsatisfactory. In 1889, 1,725 tons of grain and 74 tons of flour, total value, $151,000, and in 1890, 16,302 tons of grain and 50 tons of flour, total value, $1,025,000, were exported.

In 1893 (June 25), the following table of crop production was published officially:

Agricultural statistics.

Departments.	Crop.		Increase.
	1891-'92.	1892-'93.	1892-'93.
	Hectolitres.	*Hectolitres.*	*Hectolitres.*

A hectolitre is equal to 2 bushels 3.35 pecks.

It is only during recent years that attention has been turned to the improvement of the breeds of animals in Uruguay, but already considerable progress has been made in this direction, through the importation of thoroughbred cattle from Europe.

Not only do the grazing lands support the herds raised in the Republic, but hundreds of thousands of young cattle are brought across the Uruguay from the Argentine to fatten on the rich pastures of the country. The Departments of Salto and Paysandú receive many animals from this source. Immense quantities of *charque*, or jerked beef, are shipped to Brazil and to Europe, and since the abolition of export duties, the trade in this article has greatly increased.

There were estimated to exist in 1891 in the Republic about 8,690,000 neat cattle, about 23,000,000 sheep, 599,000 horses, 11,000 mules, 24,000 goats, and 23,000 swine. From 1878 to

1888, there were slaughtered in Uruguay 7,423,725 cattle. In 1888, the number was 740,000; in 1889, 708,923; in 1890, 642,000; in 1891 (estimated) 667,100. The total exportation of jerked beef in 1888 was 92,962,976 pounds. The average price of this article for the five years ending with 1888 was $3.25 per hundredweight. In 1889, the number of cattle in the country was estimated to be 5,281,522.

The Liebig works for the preparation of extract of meat have been mentioned in the description of the Department of Rio Negro. There are also other establishments of a similar kind in the country, one called "Cibils," at Salto, and a large one at Trinidad, but no information of their production is accessible.

Sheep farming is receiving increased attention latterly, and, apart from the value of the wool, it is becoming as important as the cattle industry. Frozen carcasses are shipped by steamer in large quantities to Europe. The improvement of the breeds of sheep will increase largely the value of the wool clip in the future. In 1889, the exports of wool amounted to 98,863,469 pounds, and in 1890, to 47,740,390 pounds. For the first quarter of the fiscal year 1891, the exportation of live stock, slaughter-house products, rural products, other products and provisions for vessels, amounted to $3,592,783; same period 1892, $3,520,447. But for the first quarter of the calendar year 1892, the exportation of these articles amounted to $8,398,302; for same period 1893, $8,234,594.

The exports of sheepskins increased from 7,964,361 pounds in 1881 to 15,129,974 in 1887. In 1889, the number of hides exported was 1,810,000 and in 1890, 2,506,202.

Of agricultural development in Uruguay, it may be said that the hopes of the future are not built upon the experience of the past; for up to the present time, growth in this branch has been quite unsatisfactory. There has been progress, but it has been feeble. The establishment of agricultural colonies, however, which is being pushed with much activity, promises better results, and the con-

sequent influx of labor to be devoted to the tillage of the fertile soil can not fail to change the present unsatisfactory condition.

In this branch particularly, statistical data are wanting or are so few and imperfect as to be of little value. Up to 1877, flour and wheat were imported into the country, and as since that time no importations have been made, enough grain has been raised for home consumption, and from 1885 to 1888, about 78,000,000 pounds of flour have been exported. The number of grist mills is given as 71, of which 60 are operated by steam and 11 by water.

The cultivation of the vine is increasing satisfactorily, and sufficient wine is already made to diminish sensibly the demand for foreign importation. The Department of Salto is pushing this industry with energy. An official report gives 756 acres planted in vineyards. One of the wine-growers already produces about 1,000 casks of red wine annually, its value being $50 per cask. A company with a capital of $100,000 has been formed in Montevideo for the development of this industry. A list of wine-growers, confessedly incomplete, gives the number of 78 for the whole country.

The Republic of Uruguay is becoming famous for the abundance, excellence, and variety of its fruit, and of late years, the exportation of pears and apples to Buenos Aires and Brazil has become of great importance. The fine strawberries of the country are to be seen in the markets of Rio de Janeiro, together with peaches and plums from the same source. Apples, pears, peaches, cherries, plums, lemons, limes, pomegranates, and grapes thrive throughout the entire territory, while in the northern part, near the Brazilian border, grow the banana, the cocoanut, the pineapple, the orange, and many other tropical and semitropical fruits. Quinces are so abundant as to form forests, and the making of preserves from this fruit constitutes a valuable industry.

The flora of the country is abundant and various. The flowers

are the admiration of all strangers, and the forests abound with woods, both cabinet and building, of great beauty and durability, which are unknown in Europe even by name. Medicinal plants also grow in great profusion.

Among the hard and durable woods, may be named the ñandubay, which, buried in the earth, becomes petrified; the urunday, the lapacho, the viraro, the coronilla, the espinello, the quebracho, the arazá, the algarroba, the guayaco or lignum vitæ; and among the softer and less durable, may be mentioned the willow, the amarillo, the acacia, the ceibo. Many others of equal value might be named, for the species and varieties are almost innumerable. In Paysandú, Minas, and Maldonado, palm trees abound, and in Rocha and on the upper Uruguay, immense groves of these trees are found. Almost everyone is familiar with the many uses to which this most valuable of trees is put, its fruit, bark, juice, pith, and leaves lending themselves to the sustenance or industry of man. The poplar, the pine, the cypress, the oak, the eucalyptus, the cedar, the magnolia, and the mulberry have been successfully acclimated.

Among the medicinal plants found in the country, are schinus, gigueron, the quinquina, the dragon's blood, the guaicum, the ysican, and others more or less known to the pharmacopeia. The bark of the schinus, the algarrobo, and the guaviyú are used in tanning, and from the leaves a black dye is prepared. The curupé and coronilla are valuable dyewoods; the batamá yields a rose-colored dye used in dyeing wools. Indigo grows wild in certain districts, and the hyssop and nopal are found in some regions.

The yerba mate, so important a plant in Paraguay, abounds also in its sister Republic, being indigenous in Minas, Tucuarembó, Maldonado, and Cerro Largo.

In the "Herbarium" of Dr. Francisco Salazar, and the "Flora del Uruguay" of Dr. Sobrón, 430 species of medicinal plants are mentioned.

Among the cereals, wheat is the most extensively grown, yielding sometimes 30 bushels for 1 sown, and next comes Indian corn, producing 300 for one, and barley, which gives 18 to 36 for 1.

All the species and varieties of garden products thrive, as beans, peas, potatoes, lentils, sweet potatoes, carrots, radishes, melons, etc., and several varieties of berries produce abundantly. Alfalfa, the clover of the south, grows luxuriantly and is exported to some extent to Brazil.

Linseed, hemp, tobacco, and saffron are produced to some extent.

Mention has already been made of the number of the principal domestic animals of Uruguay, and it needs only to be said that the facilities for the raising of these can not be surpassed elsewhere, since nowhere else exist superior conditions of climate, pasturage, and water. The horse, cow, sheep, and pig were introduced by the early Spanish conquerors. The merino sheep was imported in 1833, and later the Saxon, Negretti, and Rambouillet. The Angora goat was brought to the country in 1834.

Among the wild animals, are deer of several kinds, the otter, the wild boar, the carpincho, the ounce, the wildcat, the fox, the ant-eater, and the capivara.

The feathered tribe is almost innumerable, over 500 species being known. Among them, the stork, the crane, the wild turkey, and swan are the most notable of the larger birds, and the magpie, woodpecker, spoonbill, grouse, duck, partridge, pigeon, parrot, parroquet, kingfisher, and many varieties of humming birds are representatives of the smaller kinds. Among the song birds, the linnet, the lark, the goldfinch, the thrush, and the turtle dove may be named; and among the birds of prey, the most conspicuous are the eagle, the hawk, the falcon, the crow, the vulture, and several varieties of owls. All the domestic fowls have their representatives here.

Thirty species of reptiles are known to exist in the country, among them lizards, vipers and other snakes, and tortoises.

Fourteen species of mollusks are found and seven of crustaceous animals. The oyster, introduced from Brazil, thrives along the coast; periwinkles, cockles, and crabs abound. Thousands of tons of fish are annually sent from Montevideo to Buenos Aires. About 130 species of salt and fresh-water fish are enumerated. Among the former, the brotola, the conger, and the kingfish are most esteemed. From the rivers, are taken bagre, shad, goldfish, cavalla, eels, and fish of immense size called monguruyó and pati, which are peculiar to the country.

The hills of Uruguay are undoubtedly rich in most of the valuable minerals. Apart from the fabulous stories of abundant deposits of gold, silver, and diamonds, whose falsity has been proved, enough is surely known to substantiate the claim that the Republic is one of the most favored of countries in mineral as well as in agricultural resources. Among the metals, gold, silver, copper, iron, tin, and mercury are found. The inspector-general of mines reports a yield in 1890 from two mines of $72,449, and this with limited means for the extraction of the metal.

A lead mine has been discovered in the Department of Minas. The mineralogist Petivenit found gold, topaz, and diamonds in the bed of the San Francisco, in the same Department. Amethysts and agates are found in the northern districts, and exported to Europe to be used in the manufacture of jewelry.

Mr. Lettsom, late British Minister at Montevideo, discovered agates and marbles of several varieties, slate, alum, asphalt, gypsum, and cobalt. The same gentleman states that the silver ores of the country yield 87 per cent of metal; copper ore, 56 per cent; and magnetic iron, 72 per cent. The average yield of gold per ton of auriferous quartz from three distinct districts, in 1886, was 22.6 grams.

Limestone is abundant in Minas, Maldonado, and Florida, and marble in several Departments, as has been mentioned in the descriptions of them.

No coal mines are worked in the Republic, but deposits of this mineral are said to exist in Cerro Largo and Maldonado.

The climate of Uruguay is mild and healthful, the usual range of the thermometer being from 32° to 88° F. On the table lands, frosts occur in July and August, and in the lowlands, the temperature sometimes rises to or above 100° in February. The rainfall is abundant in all seasons, but is greatest in May and October. The little snow that falls on rare occasions rapidly disappears. The prevailing winds are from the north, northeast, east, and southeast.

Endemic diseases are almost unknown and epidemics are very rare. The hardy race that peoples the interior has seldom need of the physician or his medicines.

Chapter VI.

POPULATION AND IMMIGRATION.

The population of the Banda Oriental in the year 1769, is supposed to have been about 31,000 souls. At the time of the declaration of independence, the number was put at 74,000. A census taken in 1852, gave 131,969 inhabitants, and in 1860, a second census showed 229,480 people. In 1879, the population was 438,245.

From 1882 to 1892, the following estimates have been published by the Uruguayan Bureau of Statistics:

1882	505, 207	1888	648, 297
1883	520, 536	1889	683, 943
1884	559, 668	1890	706, 524
1885	582, 858	1891	708, 168
1886	596, 463	1892	728, 447
1887	614, 257		

The proportion in 1891 between the foreign and the native elements was 70 per cent for the latter and 30 per cent for the former. The density of the population is about 4 inhabitants per square kilometer.

The increase of the population, apart from immigration, is remarkable, as is shown by the following official statistics:

1883	13, 261	1888	14, 269
1884	11, 503	1889	14, 619
1885	13, 534	1890	13, 416
1886	13, 660	1891	16, 277
1887	13, 104	1892	16, 067

According to these figures, the average increase of the population, apart from immigration, during ten years, from 1883 to

1892, was at the rate of 21 per thousand. This rate is larger than in Buenos Aires, England, Norway, Scotland, the German Empire, Prussia, Denmark, Sweden, the Netherlands, Belgium, Bavaria, Ireland, Italy, Austria, Switzerland, China, Hungary, and France.

The rate in Buenos Aires is 14 per thousand, in England 13.7, in Norway 13.6, in the German Empire 12.4, and in Prussia 12.3.

In the blending of races that accompanied the conquest of the country the pure native element has almost disappeared, and even the "Gaucho," who represented the cross of the European and the aboriginal, has begun to adopt the civilized customs and garb and to lose himself in the growth of the modern and distinctive national type, formed by the infusion of European blood, through immigration, into the population of mixed Spanish and native origin.

The people of Uruguay are not devoid of energy and enterprise, and, but for the unfortunate political dissensions and civil wars, would have already reached a higher stage of progress. They are hospitable to excess, welcoming strangers with unaffected kindness; liberal and tolerant towards religious and political opinions different from their own; gay in disposition and fond of festivities; eager for instruction and appreciative of excellence in the arts and literature.

Like all other people of the race, they are very sensible to the charms of poetry, fond of imaginative literature, and easily moved by forensic or pulpit eloquence or the productions of dramatic and operatic art. Nowhere have the great actors and singers of the world been received by more appreciative audiences than in the theaters of Montevideo. Rossi, Salvini, Bernhardt, Tamberlik, Mario, Tamagno, and Patti have left in the capital of the Republic many enthusiastic admirers of their talent and have carried away many souvenirs of that appreciation.

The people possess the special characteristics of the races of

their origin, and are, in the main, honest and courageous, hospitable and enterprising. That the race possesses the elements capable of building up national greatness is indisputable. The proof lies in the constant progress it has made against obstacles of uncommon difficulty in the earlier times, and in spite of the civil and international wars that have so often swept over the young nation.

IMMIGRATION, COST OF LIVING, WAGES, ETC.

One of the most pressing needs of the Republic of Uruguay is labor to till the soil and supply the various branches of industry on which its prosperity, present and future, must depend; and the General Government has given some attention to attracting to the country a current of European immigration. The results of the measures thus far adopted have not been as successful as was desired, but considerable numbers, chiefly of agricultural colonists, have been induced to settle in various parts of the country, and the success of the different experiments in colonizing has been such as to encourage strong hopes for the future.

Up to 1888, the tide of immigration had not in any considerable degree been diverted from Brazil and the Argentine, owing to the superior inducements held out or supposed to be possessed by those countries, but in the year mentioned and in the succeeding one, a notable change was perceived, the arrivals being 16,581 in 1888 against 12,867 in 1887, and in 1889, the number of immigrants rose to 27,349.

The financial crisis of 1890 turned the tide backward, and in 1891, against 10,256 arrivals, there were 18,982 departures for Europe, constituting a loss of 8,726 persons. This loss was, however, partly compensated by an excess of 5,000 in the arrivals from the Argentine over the departures for that country.

It is probable, as remarked by Consul Hill in a recent report, that the greater part of the departures for Europe was composed of the floating foreign population, whom the financial stringency left without means of "floating" any longer in Montevideo.

The following table shows the arrivals and departures of European immigrants and emigrants during the years comprised in the same:

Years.	Arrivals.	Departures.
1884	11, 954	6, 040
1885	15, 679	6, 729
1886	12, 291	6, 541
1887	12, 867	6, 252
1888	16, 581	7, 601
1889	27, 349	10, 658
1890	24, 117	19, 852
1891	11, 916	18, 982
Total	132, 754	82, 655

The above statistics are for Montevideo alone; the arrivals and departures at the other ports, being comparatively insignificant, do not figure in the official reports. The movement of population between Uruguay and its neighbors, Brazil and the Argentine, is thought to be in favor of the first. The total number of arrivals of passengers in Montevideo from 1885 to 1889, inclusive, was 317,766, but only such as reported to the Commission of Immigration were considered as immigrants.

Immigration into Uruguay is principally from southern Europe, the Italians preponderating, and the Spaniards coming next in number. From 1866 to 1871, nearly half the immigrants were Italians, many being without means of supporting or establishing themselves; but after that period, though the numbers fell off considerably, those who arrived generally possessed means of self-subsistence.

The Government has encouraged the founding of colonies as centers of agricultural development, and considerable success has followed its efforts in this direction. These settlements are made up in general of immigrants of the same nationality, and several have been made in various parts of the country. Among them may be named the Vaudois Colony, settled in 1857 by Protestant

immigrants from Piedmont, who established themselves at first in Florida and afterwards in Colonia.

The Swiss Colony, in the same Department, was founded in 1861. In 1884, it contained 420 families in a prosperous condition, and had under cultivation about 27,000 acres of land, with 15,000 devoted to grazing.

The Quevedo, Cosmopolita, Sauce, Riachuelo, and Española, are flourishing settlements. The Paullier Hermanos, in San José, the General Artigas in Soriano, the Porvenir, in Paysandú, and others in various Departments are of less importance.

For the near future the success of colonization will largely depend on the acquisition by purchase or appropriation of lands now in the hands of speculators and large proprietors and opening them on easy conditions to settlers, and on the efforts of the Sociedad de Colonisacion y Formento del Uruguay, a company formed with a capital of $5,000,000 for the colonization of lands under its control. The scheme of this company is the cession of lands in stated amounts to actual settlers, advancing means and implements, to be paid for in small annual installments.

The price of land has about doubled in the last twenty-five years, and varies from $7 to $100 per quadra (1.77 acres), according to locality, but the cost of the necessaries of life is still reasonably low. The following estimate is given by an English authority of the cost of settlement and opening to cultivation of 100 hectares (247.1 acres) of land:

Purchase money of land	$2,000
Four horses, at $12 each	48
Twelve oxen, at $15 each	180
Twenty-four milch cows, at $15 each	360
Six hogs, at $2 each	12
A brick or stone house, roofed with corrugated galvanized iron, and containing three rooms, outhouses, furniture, well, a cart (no barns or stables necessary)	600
Two plows, at $20; 1 harrow, at $20, and other tools	100
Seeds for first year	10
Total	3,310

The moving and current expenses up to harvest will swell the amount to say $4,000.

It is only in the second year that the harvest gives good results on the newly opened prairie lands, and the following is the estimate for the said 100 hectares for the first year:

Two thousand one hundred and fifty pounds cheese	$258
The six fattened hogs will sell for $12 each	72
Twenty-four calves, at $2 each	48
Indian corn (minimum product)	400
Total	778

In the second year, the Indian corn will yield more than $1,000, and the products of the farm should give a total of $1,400 as an average. Of course the value of the farm products would depend largely on the vicinity of means of transportation to market, and localities would naturally be selected in view of such facilities.

In estimating the cost of subsistence, the following table of values of various eatables, etc., will be of aid. The prices are given per kilogram (2.2 pounds).

	Cents.		Cents.
Beef	12	Milk (liter)	12
Flour	9	Candles (tallow)	16
Wheat bread	10	Soap	12
Corn meal	10	Salt	6
Rice	14	Tobacco	70
Sugar	12 to 18	Oil (liter)	40
Coffee	60	Cheese	40
Wine (liter)	18		

The General Government has placed at the disposition of the Commissioner of Immigration a large and well-constructed building, measuring 131 feet square, for the reception, lodging, and feeding of such immigrants as desire such aid. The Commission furnishes them free transportation to the colony where they intend to settle.

All contracts made with immigrants for employment are supervised by the Commission, in order to prevent abuses. The fol-

lowing presents the wages usually paid in the various trades and industries. Apprentices, in general, receive lodging, board, and clothing:

Servant maids, $6 to $12 per month and board; bakers, $18 to $36 per month; brewers, $40 to $50 per month; brickmakers, $1 to $1.20 per day and board; chairmakers, $1.60 to $2 per day; hatmakers, $18 to $22 per month; cart drivers, $16 to $24 per month; boilermakers, $50 to $80 or $100 per month; cigarmakers, $1.20 to $1.50 per day; coachmen, $20 to $25 per month; hair cutters, $14 to $20 and board; conductors of diligences, $35 to $40; confectioners, $20 to $40 and $60; shoemakers, $15 to $20; overseers, $30 to $35; seamstresses, 6 to 8 reales per day and board; cooks, male, $15 to $35 per month, bed and board; cooks, female, $12 to $16 per month, bed and board; servants (general), $10 to $18 per month, bed and board; gilders, $2 per day; harvesters, $10 to $15 per month and board; restaurant waiters, $15 to $20 per month, bed and board; watchmakers, $15 to $20 per month, bed and board; lackeys, $40 to $60 per month; gardeners, $18 to $30; day laborers, 80 cents to $1 per day; mattress-makers, $12 to $15 per month and board; sailors, $15 to $25 per month and board; mechanics, $60 to $100 and $150 per month; modistes, $20 to $30 per month; nurses, $20 to $30 per month; pastry cooks, $35 to $40 per month; fishermen, $20 to $25; painters, $1.20 to $2.50 per day; photographers, $35 to $55 per month; posters, $10 to $12 per month and board; potters, 15 to 20 reales daily and board; teachers, $30 to $60 per month and board; bookbinders, $30 to $35 per month; sawyers, 18 to 20 reales daily; tailors, $20 to $30 per month; locksmiths, $1.50 to $1.80 per day; stonecutters, 12 to 16 reales per day; bookkeepers, $50 to $200 per month; turners, 18 to 25 reales per day; dyers, $15 to $25 per month; coopers, 12 to 15 reales per day; glaziers, 12 to 15 reales per day; printers, $40 to $45 per month.

The workday comprises eleven hours.

The demand for mechanical labor in its different branches is good in Uruguay, but the subdivision of these branches has not been carried so far as in the United States, and all-round skill in each is most required.

The liberal professions, as in all the Latin-American countries, are overcrowded with natives, so that there are few or no inducements, except in special cases, for foreign lawyers, physicians,

teachers, etc., to settle in Uruguay. The immigrant who, fairly equipped for the industry to which he proposes to devote himself, will resign himself to endure the first hardships inseparable from settlement in a new country, and will arm himself with patience and perseverance, can not fail, on the fertile soil of the Oriental Republic, to reap an abundant reward for his trials and efforts.

Chapter VII.

INTERNAL COMMUNICATION, FINANCE, BANKING, EDUCATION.

The numerous water ways throughout the Republic, both those which have already sufficient depth for navigation and those which, by a little dredging, can be made navigable, afford abundant facilities for internal communication by steamboat and sail. The principal of these streams have been mentioned in the descriptions of the various Departments.

The Government, in view of the difficulty of transportation of heavy machinery and materials to and from the mining districts, and of developing more rapidly some agricultural sections, has, during recent years, given considerable attention to the construction of railways, as a means of communication where none existed, and as affording facilities more direct and rapid, even where water communication was possible.

Uruguay possesses six main lines of railway (1,567 kilometers, about 930 miles, in length) in actual in operation. They are: the Central, the Northeastern, the Eastern, the Northern, the Northwestern, and the Midland Railroads. Extensions are making to all the above lines, and branches are under construction. The roads were all built under guaranty of a rate of interest, generally 7 per cent on the capital employed in their construction. No laws are in force regulating railway rates. All the roads are in the hands of private corporations.

The Central Uruguayan Railway starts at Montevideo and runs through the whole territory of the Republic, until it reaches the Brazilian frontier at the town of Santa Ana do Livramento, the

whole length of the line being 575 kilometers.* This road has a branch, 32 kilometers long, to the city of San José.

The Northeastern Railway runs from Montevideo to the city of Minas. Its length is 122 kilometers.

The Eastern Railroad starts from the Toledo station of the Northeastern Railway and reaches Nico Perez. Its length is 206 kilometers.

The Northern Railway connects Montevideo with Barra de Santa Lucía, where the principal stock yards are situated. Its length is 23 kilometers.

The Northwestern Railway starts at the city of Salto, and, after crossing the Department of the same name and that of Artigas, stops at the river Cuareim, where it makes connection with the Brazilian Railroad called "Uruguayana." Its length is 178 kilometers.

The Midland Railway connects the Central with the Northeastern Railways. The junction with the former is made at El Paso de los Toros, and with the latter at the city of Salto. Its length is 317 kilometers.

When the extensions and branches contemplated for the present leading systems shall have been completed, Uruguay will be possessed of adequate facilities for the development of many of her agricultural and industrial resources which as yet lie unemployed; and it can not be doubted that, with all her other advantages of climate, soil, and geographical situation, she will at least keep pace with her sister Republics of the southern continent.

The capital had, in 1891, 9 lines of tramways in operation, with a total length of 173 kilometers, and the number of passengers carried in that year was 18,000,000. The various companies employ in the service 3,622 horses and 507 cars, have 14 stations, and give employment to 1,019 men.

Uruguay is connected with the great network of submarine cables that puts her in telegraphic communication with the great

* A kilometer is equal to 0.62137 of a mile

cities of the world. Cable messages may be sent by the Eastern Company, via Lisbon, to Europe and North America. The two cables between Lisbon and Pernambuco, Brazil, touch at Montevideo, between which city and Buenos Aires there are two telegraph routes. Messages may be sent (and at present this is the cheaper route) by the land line across the continent to Valparaiso, thence up the west coast and across the Isthmus to Galveston.

The system of land lines of the Republic has a total length of 4,406 kilometers. It connects at Jaguarão with the Brazilian telegraph lines, so that messages may be transmitted by land to all points on the Brazilian coast or to the United States through the French cable which at Ceará connects with the Brazilian land lines, and with the Western Union in Cuba.

The subjoined table represents the condition and business of the telegraph lines for 1891:

Lines.	Extent of line.	Numbers of offices.	Number of telegrams.
	Kilometers.		
National	951	22	31, 218
Platino-Brasilero	829	15	67, 127
Oriental	1, 362	23	36, 036
Platense Brasilero	250	8	34, 940
River Plate	233	5	37, 738
Western Brazilian	347	3	8. 350
Telephonic, of the Plata	184	3	17, 188
Direct United States	250	.....	.....
Totals	4, 406	79	232, 597

Montevideo has two telephone companies, the "Uruguaya" and the "Coöperative." The former has 1,796 subscribers, and the latter, a newly organized rival, has 430 wires. The number of subscribers is said to be greater, in proportion to the population of the city, than in any other American city, except Detroit, in North America, and Rosario and Providencia, in South America.

The capital invested in these two companies is $320,000. They have 9 stations and employ 163 persons in their service.

Being a member of the Universal Postal Union, Uruguay enjoys all the advantages afforded by that institution for international postal communications. The national postal service is well conducted, and in 1889, there were in the country 488 post-offices with 709 employés; 141 of these being in the general office and the remainder in its local branches. The post routes cover 701 kilometers of railway lines, 150 of sea, and 1,125 of river service. The remaining service is performed by coaches and carriers. The mail movement in 1891 comprised 20,105,295 pieces. Of these, 6,152,654 were private letters, 423,178 official correspondence, 543,127 samples, 55,955 postal cards, and 12,930,381 pieces of printed matter. The postal revenues for 1891 were $203,585.73.

FINANCE.

One of the leading journals of Montevideo, in its annual retrospect for 1891, says:

> In spite of the losses suffered by the nation's revenues in the sharp financial crisis through which the country is passing, the finances of the nation might be placed on a tolerable footing, thanks to the arrangement made in London, with the exercise of a little economy and order in the management of the Treasury.

Reference is made here to the financial disasters of 1890, which continued in 1891, and to the efforts made by the Government to improve the financial condition by a reorganization of the National Bank, whose failure had precipitated the crisis in 1890, and by a consolidation and conversion of the national debt at a reduced rate of interest. This debt was composed of obligations held abroad, indebtedness to railways arising from guaranties, and guaranteed liabilities of the National Bank—in all, about $113,225,000.

The capital necessary for the reorganization of the bank could not be raised in London, but the Banco Popular, of Rio de Janeiro, loaned $3,000,000, with the option of $5,000,000, for the period of two years from Mach 5, 1891. This was really a loan

to the Government, since as security for the payment of the interest at 9 per cent, an additional duty of 5 per cent, pledged to such payments, was levied on imports. This loan in some measure relieved the financial stress and aided in carrying out the plan of consolidation of the national indebtedness. This plan contemplated the issuance of bonds to the amount of $96,350,000 at 3½ per cent to replace the existing obligations, and Consul Hill, in his report dated March 8, 1892, states that the majority of the bondholders had deposited their holdings in accordance with the conditions of the act authorizing the consolidation; so that the success of the measure seemed assured. According to a report made to the British Foreign Office, the financial position of Uruguay June 30, 1892, was as follows: Internal debt, $11,840,000; external (consolidated) debt, $90,710,000; international debt, $1,881,725; total, $104,431,725.

The falling off in the revenues owing to the diminished imports has embarrassed the Government considerably in its efforts to restore the financial equilibrium.

The expenditures for 1891–'92 were estimated as follows:

Service of debt	$7,286,941
Government expenses	2,100,724
War and navy	1,765,311
Pensions	1,433,941
Miscellaneous	2,659,880
Total	15,246,797

The revenues for 1891–'92 were estimated as follows:

Customs	$10,622,000
Land tax	1,800,000
Other taxes	2,987,000
Total	15,409,000

The revenues, however, fell far short of the estimates owing to decreased imports, and the President places the deficit at $3,000,000; but the fear that the 45 per cent of the customs re-

ceipts set aside for the service of the new consolidated debt may prove inadequate appears to be unfounded, as the imports in 1892 show an increase over 1891.

The condition of the banks of Montevideo reflects the effects of the financial depression in 1890 and 1891. At the end of 1889, the reserve held by the various banks amounted to $14,094,100, and the emission to $15,989,180; in November, 1890, the reserve had fallen to $8,131,453, and at the end of 1891, to $4,926,880; while the emission declined respectively to $9,337,881 and $2,392,712. Of this latter amount, the part credited to the National Bank and to the English Bank of the River Plate (also suspended), being a total of $760,452, was withdrawn from circulation; so that the entire business of the country was transacted on a paper currency of less than $2,000,000, the same amount in silver coin of the country, and the small quantity of foreign gold that remained in circulation.

The following table shows the reserve and emission of the several banks for 1891:

Banks.	Reserve.	Emission.
	Dollars.	*Dollars.*
National Bank	14, 131. 58	742, 182. 10
London and River Plate Bank	3, 820, 199. 41	1, 535, 000. 00
English Bank of the River Plate	377, 408. 02	18, 270. 00
Spanish Bank of the River Plate	320, 164. 84	126, 720. 00
Italian Bank of Uruguay	319, 297. 33	138, 100. 00
Italian-Oriental Bank	75, 678. 47	32, 440. 00
Total	4, 926, 879. 65	2, 392, 712. 10

The deposits in bank for 1890 amounted to $23,489,969, but in 1891, fell off to $15,171,184. The failure of the English Bank which took place in July, 1891, gave a blow to confidence in the banking institutions of the country from which recovery must be slow. Fortunately, the other banks were strong enough to meet the demand upon them that followed.

The total monetary circulation in July, 1892, is stated as $5,000,000, of which $2,388,000 was paper. The total circulation and reserve were estimated at $20,000,000.

The following is a list of the banks with their capital in 1889:

Banco de Crédito Auxiliar	2,000,000
Banco de Crédito Unido	5,000,000
Banco Italo-Oriental	8,000,000
Banco de la Bolsa	3,000,000
Banco Departmental de la Colonia	1,000,000
Banco General Uruguayo	10,000,000
Banco del Monte de Piedad y Caja de Ahorros de Montevideo	10,000,000
Banco Trasatlántico del Uruguay	22,000,000
Banco de Cobranzas, Locacion y Anticipios	400,000
Banco del Plata	20,000,000
Banco Monte de Piedad y Caja de Ahorro	10,000,000
Banco Hipotecario y Constructor de Tacuarembó	1,000,000
Banco Agrícola Comercial del Uruguay	10,000,000
Banco del Comercio Minorista	1,000,000
Total	$103,400,000

Besides the fourteen banks enumerated above, there were nineteen companies and forty-two associations of different kinds authorized to do business in securities and credits, with an aggregate capital of $144,791,000.

PUBLIC INSTRUCTION, EDUCATION, ETC.

The number of public and private schools in the several Departments has already been mentioned.

In the public schools, primary instruction is compulsory between the ages of six and fourteen years, and the attendance is quite up to that in other States, in proportion to the population. The statistics for 1891 show the existence of 483 public schools, with 43,676 pupils. The number of teachers employed in these was 863, of whom 272 were male and 591 female; 688 natives and 175 foreigners.

The normal school for girls was attended by 33 students, and during the year, there was established a similar institution for boys, at which the attendance was 41. The statistics of private schools

for 1891 show that there were then 375. The total attendance at these schools was 21,945.

It will be seen, then, that the total attendance at the public and private schools of the Republic in 1891 was 65,621.

The average of salaries paid to male teachers in the public schools in 1891 was $36.27 and to females $35.71 per month.

The number of public schoolhouses was 94, and the amount expended in support of primary instruction in 1890 was $690,574. The amount of capital invested in public-school buildings in 1891 was $663,362.

The University of Uruguay has been alluded to elsewhere.

The Military School had 79 students of 14 to 24 years, 16 professors, and 11 adjuncts.

The School of Arts and Trades is a flourishing institution, and conducted on a military plan. Each pupil who enters is bound to remain for a term of years, and must not be more than 14 years old. The plan of instruction embraces a wide range. Commencing with simple carpentry, the pupil is gradually conducted to more difficult and artistic work, such as wood and metal carving and engraving. Painting, drawing, music, etc., represent the fine arts in the course.

The gunboat *Rivera*, which afterwards did good service, was constructed by the workmen of this school.

The institution had in 1889 172 pupils, bound for four, five, or six years.

Almost every town in the Republic has one or more daily newspapers, the total number in 1891 being 105.

Naturally, the most important and influential of these are published at the capital, and are:

El Siglo (two editions daily), La Nacion (semiofficial), La Razón (two daily editions), El Bien-Publico (Catholic organ), El Telégrafo Maritimo (commercial), The River Plate Times (English), The Express (English), El Ferrocarril (evening), La

Tribuna Popular (evening). Besides, there are others of less circulation in Spanish, French, and Italian.

Several interesting reviews are published at the capital, and scientific, artistic, and literary societies and clubs are numerous. Mention may be made of the Uruguay Athenæum, the Catholic Athenæum, the University Athenæum, the Military Athenæum, the Society of Arts and Sciences, the Musical Association, and the Lycée.

The different nationalities have their respective clubs in Montevideo, at which lectures, balls, and receptions are given, and the Montevideans have enjoyed the pleasure of listening to the world's best singers and actors. The Solis Theater rivals in decoration and arrangement the best of Europe and of North America.

The National Museum at Montevideo contains 14,124 different objects in the sections devoted to archeology, history, zoölogy, botany, mineralogy, etc., among which are many interesting relics of the races that peopled the country before the Spanish conquest.

The National Library contains more than 20,000 volumes and 2,300 manuscripts, and the University Library possesses some 5,000 volumes.

MONEY, WEIGHTS, AND MEASURES.

The Republic has no gold currency of national coinage, but the coins of foreign countries circulate freely. The following are the legal values of the several gold coins in circulation:

Twenty-mark piece (Germany)	$4.60
Argentine $5	4.66
Eight florins (Austria)	3.73
Twenty milreis (Brazil)	10.56
Condor (Chile)	8.82
Twenty pesos (Colombia)	18.66
Doblón of 100 reales and 10 escudos (Spain)	4.82
Twenty-five pesetas piece (Spain)	4.66
Eagle (United States of America)	9.66
Twenty francs (France, Italy, etc.)	3.73
Pound sterling (Great Britain)	4.70

Twenty sols (Peru)	18. 66
Corona (Portugal)	10. 45
Twenty pesos (Venezuela)	18. 66

There are about $2,000,000 in silver in circulation, coined in the mint at Buenos Aires.

The monetary unit is the peso, or dollar of silver, of 100 centenas, or cents, whose approximate value compared with the United States silver dollar, is $1.035.

The notes of the various banks of issue make up, with the above-mentioned coins, the circulating medium of the currency. The amount of their issues has been stated elsewhere. The notes of the banks, except the National Bank, are redeemable on demand in coin.

The Metric System has been officially adopted in Uruguay, but, as in other South American countries, the majority of the people still use the old weights and measures.

The following tables exhibit the weights and measures of Uruguay, with their metric equivalents:

Weights and measures.

LINEAL MEASURE.

		Meters.
1 Légua lineal	=	5. 154
1 Cuadra	=	85.
1 Vara	=	.859

1 litre =	1.0567 quarts.	1 quart =	.9463 litre.
1 hectolitre =	2.64186 gallons.	1 gallon =	3.7852 litres.

Chapter VIII.

COMMERCE AND NAVIGATION.

The ports of entry of Uruguay on the Rio de la Plata are Montevideo, through which by far the greater part of the foreign commerce of the Republic is carried on, Maldonado, and Colonia, and of less importance, Paloma, Coronilla, Castillo Grande, Buceo, and Ensenada del Inglés. On the Uruguay, are Nueva Palmira, Carmelo, Independencia or Fray Bentos, Paysandú, Salto, Constitución, and Santa Rosa. On the Rio Negro, are Soriano and Mercedes. San Salvador is on the river of the same name.

Through these ports, is carried on the foreign trade of the country, which is estimated at $50,000,000 per annum, a magnificent total for a nation of 700,000 people. The increase has not been so great as in some other countries, but it has been constant and healthy. Few other countries can show a foreign commerce that averages $70 per inhabitant. The report of the Special Commission sent by the Government of the United States to study South American commerce shows Uruguay to be the most actively commercial nation of Latin America.

Of the exports in 1891, Great Britain took 18.37 per cent; France, 23.27 per cent; Germany, 5.45 per cent; Spain, 0.84 per cent; and the United States, 6.85 per cent.

Of the imports, 28.85 per cent came from Great Britain, 13.05 from France, 9.72 from Germany, 9.63 from Spain, and 4.89 from the United States.

Each successive year up to 1889 shows an increase in the entries and clearances of steamers and sailing vessels in the ports of the Republic. In 1889, the number of these reached 35,582, and their aggregate tonnage was 12,444,462, being an increase over the preceding year of 329 vessels, and 1,892,838 tons. In 1890, the number of vessels entered was 32,213, with a total tonnage of 11,442,894. In 1891, the number of vessels was 27,207 and the tonnage 9,482,644.

The following table exhibits the entries and clearances for Montevideo for the year 1891:

Class of vessels.	Entered.		Cleared.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.
Steamers	658	1,154,477	635	1,074,036	1,293	2,228,513
Sailing vessels	434	275,184	324	209,013	758	484,197
Total	1,092	1,429,661	959	1,283,049	2,051	2,712,710
Total in 1890	1,431	1,812,361	1,362	1,779,277	2,793	3,591,638
Decrease	339	382,700	403	496,228	742	878,928

Of the vessels arriving in 1891, there came in ballast 15 steamers of 14,355 tons register and 12 sailing vessels of 5,876 tons; and 43 sailing vessels of 22,752 tons register made no operation in this port, proceeding with all their cargo up the river Plate. Of the clearances of 1891, there left in ballast 41 steamers of 26,690 tons register and 176 sailing vessels of 147,169 tons.

Table showing the coast and river trade of Montevideo in 1891.

Class of vessels.	Arrivals.		Departures.	
	No.	Tons.	No.	Tons.
Steamers	1,261	1,217,106	1,315	1,315,194
Sailing vessels	1,680	85,542	1,785	143,750
Total	2,941	1,302,648	3,100	1,458,944

Of these, 102 steamers of 31,254 tons and 171 sailing vessels of 8,346 tons entered in ballast, and 72 steamers of 22,461 tons and 519 sailing vessels of 42,507 tons cleared in ballast.

At all the other ports of the Republic there arrived in 1891, 9,637 vessels (5,180 steamers and 4,457 sailing vessels) of a registered tonnage of 2,009,951 tons, of which, however, nearly three-fourths were in ballast. The proportion of vessels coming from foreign ports contained in the above figures can not now be obtained.

The great increase in navigation will be seen when it is considered that in 1886 the number of steamers arriving in Montevideo was 611, and of sailing vessels 545, with a total of 1,232,416 tons burden.

Montevideo has excellent steam communication with the following European ports by regular lines: Liverpool, Pacific Steam Navigation Company, Houston Line, Lamport & Holt's Line. London, Houlder Bros., Holland & Co., etc. Southampton, Royal Mail Company, and Belgian Mail. Antwerp, Belgian Mail, Lamport & Holt, Houston Line. Havre, Chargeurs Réunis. Bordeaux, Messageries Maritimes. Marseilles, Société des Transports Maritimes. Genoa, La Veloce and General Haitian Navigation Company. Barcelona, Compañia Transatlantica Española, and Marqués de Campo Line. Glasgow, Lamport & Holt, Allan Bros., Bell & Co., etc.

With its comparatively long coast line, where ports may be opened; with the large and navigable rivers that form the greater part of its boundaries, where already exist ports whose capacity has not begun to be tested; with its internal waterways deep enough for interior navigation, the Republic of Uruguay possesses all the facilities that nature can give a nation for a commerce that must continue to increase with the development of its industrial resources.

Little more than twenty years ago, commu

Uruguay and foreign countries was almost entirely dependent on sailing vessels, the arrival and departure of steamers being one or two per month; but to-day, there is hardly a port in the world better provided than Montevideo with steam communication with the great commercial centers of the world.

FOREIGN COMMERCE.

The following table shows the value of imports into Uruguay, by countries from 1886 to 1892, inclusive:

Countries.	1886.	1887.	1888.
	Dollars.	*Dollars.*	*Dollars.*
Great Britain	5, 610, 784	6, 710, 971	9, 526, 774
France	3, 410, 384	4, 114, 045	4, 531, 988
Brazil	1, 486, 983	1, 826, 870	2, 623, 939
Spain	2, 015, 066	2, 149, 133	2, 200, 030
Italy	1, 492, 102	1, 697, 276	2, 400, 466
United States	1, 246, 819	1, 701, 964	1, 584, 908
Germany	2, 098, 809	2, 839, 296	3, 042, 014
Belgium	861, 937	1, 195, 562	1, 594, 266
Cuba	193, 008	216, 458	189, 954
Argentine Republic	517, 562	442. 897	763, 347
Chile	197, 712	97, 379	119, 819
Holland	133, 084	64, 316	27, 985
Paraguay	174, 065	151, 398	130, 953
Norway and Sweden	535	.....	.....
Denmark	2, 282	.....	.....
Portugal	62, 332	24, 875	23, 378
India, China, Japan	12, 107	7, 982	20, 994

The port of Montevideo alone received 88.54 per cent of the imports and cleared 57.1 per cent of the exports in the foreign commerce of the country in 1890. Its proportion in 1887, was 94.74 and 63.31 per cent respectively.

In 1891, the imports show a decrease from those of 1890 of about 40 per cent, as is seen by the following table:

Articles.	1890.	1891.
Liquors	$4,408,468	$2,998,361
Comestibles	6,777,837	4,317,318

Decrease	.....	13,586,207

The falling off in imports in 1890, 1891, and 1892 is due to the financial crisis prevailing in the country, but an increase in the

exports, except in 1892, will be noticed in the following table, as the result of necessity for the payment of foreign indebtedness.

The following exhibits the value of exports from Uruguay by countries:

EXPORTS FOR 1889, 1890, 1891, AND 1892.

Countries.	1889.	1890.	1891.	1892.
	Dollars.	*Dollars.*	*Dollars.*	*Dollars.*

Not specified	3,743,484	5,405,322	878,148	2,146,834
Total	25,954,107	29,085,519	26,298,268	25,951,819

Of the total importation from the United States in 1890, lumber, kerosene, and wheat (including flour) formed about 60 per cent. Out of a total importation of $3,770,977 of dry goods, only $48,355 were from the United States, and the same country supplied comestibles to the value of only $188,324 out of a total importation of $6,777,837.

In the imports from Great Britain for 1890, cotton goods figure for $1,153,087, while the importation of the same from the United States amounted to only $20,529.

For the first six months of 1892, the imports at Montevideo amounted to $9,116,729.59 and the exports to $15,828,262.04. Official statistics show that during the first quarter of the calendar

year 1893, the imports of the Republic amounted to $5,069,854.51 and the exports to $8,234,594.87. For the same period in 1892, the imports were $4,796,936 and the exports $8,398,302.

The following figures (cents omitted) show the customs returns of the Republic of Uruguay for the past half of the current year, 1893, as compared with the corresponding period of 1892:

	1892.	1893.
January	$708, 055	$769, 107
February	775, 836	745, 193
March	893, 982	822, 820
April	871, 161	874, 492
May	772, 912	734, 138
June	624, 712	672, 945
Total	4, 646, 658	4, 618, 695

There is, it thus appears, a decrease for the current year of 27,-293, The Montevideo Times condenses some remarks on this subject by the Siglo as follows:

"The result might be disheartening to those who had hopes for a rapid reaction, without counting on three successive years of bad harvests and low prices, but it is not so for those who held the opinion that when the foreign debt was rearranged in London bottom had not been touched and further falls in revenue and consumption were to be feared. Facts have now shown that, were it not for such natural calamities as drought, locusts, etc., which defy human forethought, there would certainly have been an increase of revenue, for even with this, it has remained practically stationary. But even with the revenue in this stationary condition, the result should be tranquilizing for the great problems of financial regularity, so long as during the remainder of the present presidency and in that which follows, restraint is practiced in public expenditure, and some advance is made, even if slowly, in the great task of establishing administrative morality. With the $8,500,000 yielded by the custom-house and nearly $5,000,000 arising from other sources, there is sufficient to attend

to the payment of all the national obligations and even enough to prepare to take advantage of the first increase in the revenue to relieve the country from the burden of some of the recent taxes which hinder the development of its resources."

COMMERCE OF THE UNITED STATES WITH URUGUAY.

The statistics of Uruguayan commerce divide the imports into the following classes:

Liquors, comestibles, tobacco and cigars, dry goods, ready-made clothing, machinery, etc., and miscellaneous. The following is a table published officially at Montevideo, showing the commerce of Uruguay with the United States from 1882 to 1891:

IMPORTS.

Year.	Liquors in general.	Comestibles, cereals, and spices.	Tobacco, cigars, and cigarettes.	Dry goods.
	Dollars.	*Dollars.*	*Dollars.*	*Dollars.*

TREATY OF COMMERCE.

The treaties of commerce entered into, respectively, on the 4th of July and the 19th of August, 1892, between the Republic of Uruguay and the Argentine Republic with the French Republic were proclaimed at Paris on the 10th of June, 1893. France and Uruguay reciprocally guarantee to each other treatment upon the footing of the most favored nation in everything relating to the "domiciliation and settlement of their respective citizens in their respective territories, and in all matters connected with commerce, navigation, the importation, exportation, and transit of merchandise, the assessment and payment of customs duties, and all acts and operations required for the carrying out of commerce or of any industry, and the payment of taxes or charges."

But the Republic of Uruguay reserves the right to grant for her own benefit, and whenever deemed by her to be advisable, for any one of her neighbors—Brazil, the Argentine Republic, or Paraguay—special commercial favors and advantages without thereby entitling France to claim the same privilege. This exception does not apply, however, to a certain number of articles, such as wines, manufactures of silk, wool, or cotton, passementerie articles, refined sugar, prepared skins and furs, leather or skin articles, house furniture, implements, machinery, and in general all articles of merchandise similar to the French, which shall always fall under the general provision.

The coastwise trade in each country is also exempted from the operation of the treaty and left subject exclusively to the respective municipal legislation.

The Franco-Argentine treaty, which substantially contains no more than one provision, stipulates expressly that no favor or immunity of any kind shall ever be granted by either nation to the flag or the commerce of another nation without the same favor or immunity being *per se* and *ipso facto* granted to the flag or the

commerce of the Argentine Republic or of France, and that in consequence thereof citizens, as well as vessels and merchandise, of either country, in the territory or within the jurisdiction of the other, will ever be treated, especially in so far as customs duties are concerned, upon the same footing as the citizens, vessels, and merchandise most favored either by law or treaty.

Both treaties shall remain in force until the expiration of one year subsequent to the date in which either contracting party gives notice to the other of its desire to terminate the agreement.

APPENDIX B.

Import Duties.

DERECHOS DE IMPORTACIÓN DEL URUGUAY.

The collection of duties in Uruguay is based upon the official valuation of the various articles of merchandise established by a commission composed of the Director-General of Customs, the collector, inspectors, and an equal number of merchants, and two manufacturers selected by the Minister of the Treasury from those licensed and engaged in active business. The general rate of duty imposed is 31 per cent on the official valuation, but certain articles are taxed at the rates of 8, 12, 20, 44, 48, and 51 per cent on the same valuation. There are also a few articles which are subject to a specific rate of duty irrespective of their value and other articles which are admitted free. Articles not included in the tariff are valued by the customs officers taking articles on deposit as the basis of valuation.

The metric system of weights and measures is required to be used in making out invoices and other custom-house papers. In the following pages the Uruguay gold dollar is valued at $1.034 in United States currency, that being the valuation estimated by the Director of the Mint of the United States in pursuance with requirements of law, but this estimate will, of course, vary according to the price of silver.

Following are the principal equivalents appearing in the tariff:

1 kilogram	=	2.2 pounds.
1 centimeter	=	.3937 inch.
1 meter	=	39.37 inches.
1 square meter	=	10.764 square feet.
1 gram	=	15.4323 grains.
1 liter	=	1 quart.
1 hectoliter	=	2.83 bushels.

NOTAS REFERENTES Á ARTÍCULOS DE ALMACÉN.

(1ª) Los avalúos expresados en esta sección, se refieren á artículos en cajas ó botellas comunes.

(2ª) Si viniesen en cajas, botellas ú otro cualquier envase de fantasía, éste se aforará por separado del contenido.

(3ª) En los artículos avaluados peso bruto, están comprendidos todos sus envases.

(4ª) En los artículos avaluados incluso envase, se entiende sólo el interior.

(5ª) Los artículos avaluados incluso envase, y que no tengan más que uno solo, se despacharán como peso bruto.

(6ª) Los artículos en que no se menciona peso bruto ni incluso envase, se entiende peso neto.

SPECIFIC DUTIES.

Alcoholic beverages and Vermouth, Fernet and the like, in casks, up to 20°, will pay 37 cents per liter; higher strength in proportion.

The same in bottles, from 51 centiliters to 1 liter, up to 20°, per bottle, 37 cents.

Those of larger or smaller size, or higher alcoholic strength, in proportion.

Rum, up to 20°, 10 cents per liter; from 20° and upwards, in proportion, adding a half centesimo for each degree in each liter.

NOTES REFERRING TO GENERAL MERCHANDISE.

1st. The valuations in this section refer to articles in ordinary boxes or bottles.

2d. Should they come in fancy boxes, bottles, or any other package, the latter will be appraised without reference to the contents.

3d. Articles whose valuation is on the gross weight include all the packages.

4th. Articles whose valuation includes package mean only the inner container.

5th. Articles whose valuation includes package, and which have only one, will be dispatched as gross weight.

6th. In the case of articles where no mention is made of gross weight, or including package, net weight will be understood.

SEVENTH SECTION.—MISCELLANEOUS ARTICLES—Continued.

Articles.	Valuation.	Duty.
	Dollars.	*Per cent.*
Roman and Portland cement, gross weight.....100 pounds..	.752	20
Fire or apyrous clay, gross weight.....do....	1.41	20
Gypsum or plaster of Paris—		
In powder or lumps, gross weight.....do....	.705	20

NOTE.—The square meter of wood is 10 feet square.
Waste and shrinkage.—Flags or blue tiles, on total cargo, 4 per cent.
Flags or blue tiles, from Marseilles and Havre, called tiles, hollow bricks, and clay pipes, in general, total cargo, 15 per cent.
Fire bricks, for furnaces, on total cargo, 5 per cent.
Hard wood and pine, invoiced in square meters, on total cargo, 3 per cent.
Marble tiles, white, loose; those 12.87 inches long, in the rough, will be dispatched at 11.48 inches.
